Is Your Software Vulnerable To Cybercrime?

Third-party support and self-maintenance can't protect you—The real solution is at the source.

Cybercrime is Real
$6 trillion
The estimated annual cost of cybercrime damages worldwide by 2021

Cyberattacks are the fastest growing crime

$3.92 million
annual cost per data breach as of 2020

Many businesses never recover from the fallout.

Don't be fooled by third-party support providers and self-maintenance security methods

There's no patching in "virtual patching". It is necessary for all organizations to establish a strong ongoing patch management process to ensure the proper preventive measures are taken against potential threats. Neglects root problem Ignores full scope of vulnerabilities

"Holistic security" isn't whole; firewalls aren't fireproof

Security patching is essential for securing enterprise software. If you don't get patch updates, your software is open to a hack. Powerless to (legally) fix vulnerabilities

Self-maintenance = potential liability

The Bottom Line

Only Oracle Can Secure Oracle Software

Oracle Support is the only way to guarantee mission-critical security updates and protection for your Oracle software.

Oracle has the tools, experience, and knowledge

Oracle provides security at every level

Oracle creates and owns the source code

Oracle has the processes, experience, and knowledge

Oracle provides security inventory management processes

Oracle creates and owns the source code

Oracle provides security at every level

Oracle has the tools, experience, and knowledge

Get more from Oracle.

When your business is on the line, there’s no substitute for trusted, secure, and comprehensive support.
