Is Your Software Vulnerable To Cybercrime?

Third-party support and self-maintenance can’t protect you—the real solution is at the source

Cybercrime is Real

$10.5 trillion

The estimated annual cost of cybercrime damages worldwide by 20251

Cyberattacks and data breaches continue to increase exponentially

$4.35 million

Global average cost of a data breach as of 20223

Ransomware attacks are on the rise4

Many businesses never recover from the fallout

Don’t be fooled by third-party support providers and self-maintenance security methods

There’s no patching in “virtual patching”1

Virtual patching is a workaround that doesn’t actually patch or update your software.

Firewalls aren’t fireproof2

Perimeter-focused security strategies leave your software open to aack.

Self-maintenance = potential liability3

Doing it yourself cuts your software off from critical security updates.

The Bottom Line

Security patching is essential for securing enterprise software. If you don’t own the code, you can’t patch or update it. That leaves your software open to attack and your business open to risk.

Only Oracle Can Secure Oracle Software

Oracle Support is the only way to guarantee mission-critical security updates and protection for your Oracle software.

Oracle creates and owns the source code

Oracle provides security at every level

Oracle has the tools, experience, and knowledge
