Overview

Designed for organizations committed to adopting best practice ERP Cloud testing processes in an accelerated manner, the Oracle Cloud testing approach improves application quality, process reliability and return on investment (ROI).

Service Offerings

This service can be subscribed to as an add-on to your implementation project as well for testing post-production patches and release upgrades on an ongoing basis. To lower the cost of ownership customers typically asks how much testing is sufficient to assure process reliability before production deployment; are skills, resources and processes in place to ensure timely reliable delivery.

Increasingly, customers view ERP testing as an area of expert service that requires comprehensive knowledge in ERP software, testing, processes, methodology and technology. Oracle consulting experts help improve business performance through increased process efficiencies with reduced quality assurance cost.

Our extensive testing experience has helped customers prevent application defects from impending services and negatively affecting business performance. Our risk based approach focuses on identification, prioritization of critical business functions to provide comprehensive test coverage, early defect detection and lower cost of quality assurance.

Our methodology includes root cause analysis, test results interpretation, and requirements traceability to meet desired business objectives. Defined test matrices illustrate improved productivity and reduced costs.
