Scope

This document applies to Oracle Global Business Unit Cloud Services (formerly known as Oracle Cloud Services for Industry (OCI)).

The Oracle Global Business Unit Cloud Services organization supports the cloud offerings provided by the following:

- Communications Global Business Unit (CGBU),
- Financial Services Global Business Unit (FSGBU),
- Health Sciences Global Business Unit (HSGBU),
- Hospitality Global Business Unit (HGBU) (former Micros Cloud Services),
- Food and Beverage Global Business Unit (FBGBU)
- Construction and Engineering Global Business Unit (CEGBU),
- Retail Global Business Unit (RGBU), and
- Utilities Global Business Unit (UGBU).

This document is a supplement to the *Oracle Cloud Hosting & Delivery Policies*. Its purpose is to account for exceptions and additional terms specific to the Oracle Global Business Units. The content of this document takes precedence over the *Oracle Cloud Hosting & Delivery Policies*.

1. Service Availability

For purposes of calculating the Service Availability Level of the Oracle Cloud Services, “Available” or “Availability” means that You and Your Users are able to log in and access the OLTP or transactional portion of Cloud Services.

Target Service Availability Level objectives are as outlined in the Oracle Cloud Service Level Agreement section in the Oracle Cloud Hosting & Delivery Policies document, or in the applicable Service Description related to the specific Global Business Unit cloud service.

Oracle works to meet a Target System Availability Level for the measurement period of each calendar month, commencing at Oracle’s activation of the production environment.

2. Change Management

Application Upgrades and Updates

Oracle requires all Cloud Services customers to keep their Services current with the software versions that Oracle designates as generally available (GA) for such Services. Software updates or upgrades will follow the release of every GA release and are required for the Services in order to maintain version currency. For certain Cloud Services, Oracle performs upgrades by upgrading Your non-production environment to the latest version of the Cloud product before upgrading the production environment.

Oracle Cloud Hosting and Delivery Policies, such as Service Levels Agreement, and the Support Policy, are dependent on You maintaining GA version currency. Oracle is not responsible for performance or security issues encountered with the Cloud Services that may result from running earlier versions. Oracle will provide prior notice for updates or upgrades that involve service interruption to You.

Oracle typically schedules application upgrades every 2nd and 4th Friday of the month between 21:00-06:00 (Saturday) data center local time. For some sectors such as Hospitality and Retail, Oracle will schedule the application upgrade on a weekday to accommodate Your business operations.

If You are eligible to select Your own upgrade window, You will either be contacted by Oracle to coordinate the upgrade change window, or You will be able to select target hour and date with the exception of blocked time periods that Oracle reserves for core system maintenance.

Application Changes

Access to production servers at the operating system and database level is restricted to Oracle Global Business Unit Cloud Services and Application Management groups. Customer changes to the application are allowed only via the defined user interface, web service, or a standardized API. Alteration or extension of the underlying base application code is not allowed as a mechanism of customizing the application.

Core System Maintenance

Core system maintenance involves changes to hardware, network systems, security systems, operating systems, storage systems, or general supporting software of the cloud infrastructure. Core system maintenance may result in service interruption. Oracle works to limit any service interruption due to core system maintenance to less than 2 hours during a scheduled service period. Oracle may elect not to schedule a core system maintenance event.

Oracle typically schedules core system maintenance on Fridays between 21:00- 06:00 (Saturday) data center local time.

Routine Infrastructure Maintenance

Oracle manages routine infrastructure maintenance activities for the purpose of providing environment currency, capacity, and stability. Routine maintenance is not expected to result in a service interruption. When possible, routine infrastructure maintenance will be performed during the Core System Maintenance window and follow the same notification policy.

Supported Versions and End of Life (EOL) for Oracle Business Unit Cloud Services

If Oracle is no longer supporting or otherwise making any of the Originally Ordered Cloud Services supported versions to its commercial customers "End of Life Products", Oracle will provide You with no less than twelve (12) months advance notice prior to the date when the Originally Ordered Cloud Services are no longer supported.

Specific Cloud Services have published Supported Versions and EOL practices information. Where applicable, the documentation is available here: <https://www.oracle.com/corporate/contracts/cloud-services/service-descriptions.html>

3. Disaster Recovery

Disaster Recovery services are intended to provide service restoration capability in the case of a major disaster, as declared by Oracle that leads to loss of a data center and corresponding service unavailability. For the purposes of this Policy, a "disaster" means an

unplanned event or condition that causes a complete loss of access to the primary site used to provide the Oracle Cloud Services such that Your production environments at the primary site are not available.

The Recovery Time Objectives (RTO) and Recovery Point Objectives (RPO) do not apply to Your customizations that depend on external components or third-party software. During an active failover event, non-critical fixes and enhancement requests are not supported. You will be solely responsible for issues arising from third party software and customizations to Oracle programs and services.

The RTO and RPO Level objectives are as outlined in the applicable Service Description related to the specific Global Business Unit cloud service.

Upon Oracle's declaration of a disaster, Oracle will commence the Disaster Recovery Plan to recover production data to the most recent available state to reconstitute the production environments of the affected Cloud Services with the Recovery Time and Recovery Point Objectives as defined in the Service Description for the applicable Global Business Unit cloud service. Production services may operate in a degraded state of performance for the duration of the disaster event.

A Recovery Time Objective (RTO) is Oracle's objective for the maximum period of time between Oracle's decision to activate the recovery process to the secondary site due to a declared disaster, and the point at which You can resume production operations in the secondary production environment. If the decision to failover is made during the period in which an upgrade is in process at the secondary site, the RTO extends to include the time required to complete the upgrade. A Recovery Point Objective (RPO) is Oracle's objective for the maximum possible length of time during which data could be lost in the event of a disaster. The RPO time excludes any data loads that may be under way when the disaster is occurring.

3.1 Oracle Hospitality Cloud Services Disaster Recovery

In the event of a declared disaster, Oracle may recover and restore the production environment of the affected Hospitality Cloud Service and work to restore production data using a recent backup made prior to the onset of the disaster. Oracle may elect to restore the production environment in an alternate, available data center of Oracle's choice. When using a backup for recovery and restoration of the production environment and production data, published RTOs and RPOs, if any, will not apply.

4. Oracle Cloud Support Policy

For Oracle Hospitality Cloud, the following applies in lieu of the text in section 5.1.3 of the Oracle Cloud Hosting and Delivery Policies:

- First Line Support (Level 1)

For Oracle Hospitality Cloud, the following applies in lieu of the text in section 5.3 of the Oracle Cloud Hosting and Delivery Policies

- Reasonable efforts will be made to respond to service requests per the Response Times set forth in the guidelines below; however, Oracle's failure to adhere to the times stated will not constitute a breach by Oracle. The guidelines are for informational purposes only and subject to change at Oracle's discretion.

| Severity Level | Response Time Goal | Update or Resolution Goal |
|----------------|--------------------|---------------------------|
| Severity 1 | 5 minutes | 1 hour |
| Severity 2 | 2 hours | 6 hours |
| Severity 3 | 8 hours | 24 hours |
| Severity 4 | 24 hours | 48 hours |

For purposes of the above table, the following definitions apply:

- Severity 1: Major system disruption (e.g., a major disruption in business-critical system operability or functionality, server crash or total system failure)
- Severity 2: Severe system disruption (e.g., A severe disruption in business-critical functionality that does not impact the entire system such as: significant number of workstations/terminals unable to perform or post transactions, loss of ability to perform payment functions, total Loss of reporting (local or hosted), loss of all printing, failure to reset totals or complete EOD/SOD/Night Audit, reposting for a given date or range of date, very slow page or image loading, or inaccessible tools interface)
- Severity 3: Single function failure (e.g., a minor disruption in operability or functionality that does not impact the entire system such as: timekeeping issues, isolated printing failure, isolated workstation/terminal failure, MyMicros unable to review one report within the portal password resets for Oracle Cloud Applications, or Icare loyalty program that is not functioning or has stopped working)
- Severity 4: Minor/Procedural issue or question (e.g., programming or configuration related questions, questions relating to functionality, operability, or formatting or cosmetic problems)

5. Information Transfer

Secure File Transfer Protocol (SFTP)

The secure file transfer protocol (SFTP) services, if used for Oracle Cloud Services, are limited-access systems for the purpose of uploading or downloading data files in a secure manner. SFTP downloads/uploads are recorded in an electronic audit log that includes: date and time, user name, and name of file up/downloaded.

Traceability of user requests for SFTP access and modifications to access rights is provided through change control processes.

Account Usage

Oracle reserves the right to restrict access, limit use of the SFTP Service, or remove access for any nonconforming users, sites, or customers, without prior notification, whenever the use of the service is not in compliance with the terms of use. Access is granted on each account to specific directories using the principle of least privilege. Customer accounts have full read-write access to the data in each directory to which the user has access.

Technical controls in place are designed to ensure confidentiality of data and to prevent unauthorized access to other accounts' data. Attempts to access directories not authorized for a given account are a violation of the terms of use, and the account may be suspended. Oracle is not responsible for unauthorized customer access to data within a directory by an account which has authorized and approved access.

Account Provisioning

Currently, SFTP accounts are created with a strong 10-character password. The account password will be sent in an email to the address associated with the account. For this reason, the email address associated with an account must be a valid individual email and may not be a shared account or company e-mail distribution list. Inactive accounts will be disabled, and then deleted under the following schedule:

Accounts that are inactive for 3 months will be disabled.

Accounts that are inactive for 6 months will be deleted.

The Oracle logo, consisting of the word "ORACLE" in white, uppercase, sans-serif font, centered within a red rectangular background.

You must submit a request via the ticketing system to terminate accounts that are no longer required or need to be revoked.

Account Authentication

Passwords are automatically generated and cannot be changed by the account holder or recovered by Oracle. If a password needs to be changed or reset, the account holder must submit a formal change request via the ticketing system to have a new password generated. The updated account password will be sent in an email to the address associated with the account.

Account Authentication – Alternate Automation Methods

The SFTP service supports public key authentication; a method of automatic password-less login. Each account has a public key directory. By generating a local private and public key pair, uploading the public key file to this directory, and configuring the client software to use public key authentication, an account user can log in without being prompted for a password. Multiple public key files per account are supported by Oracle.

Acceptable Usage

All data transferred via the SFTP service must be for the specific business purpose and function of supporting Your hosted environment(s). The SFTP service may not be used for data backups, temporary storage, unlicensed copyrighted materials, or other illegal materials. Your integrations employing the use of automated data transfer agents or 'scripts' are permitted, however they should either run manually or on a periodic schedule not to exceed a SFTP connection rate of 10 times per hour. The use of automated processes that aggressively connect, or that do not properly connect, authenticate, perform an appropriate file transfer operation, or properly disconnect, is a violation of the terms of use.

Data Storage

Data stored on the SFTP server will automatically be deleted after 60 days. All incoming and outgoing SFTP data is considered transient data and not subject to backup retention. The only exception is that the directory structure and any ssh login key file information is retained and not automatically deleted.

Payload Encryption Requirements – Data-at-Rest

If the service offering is subject to external regulatory requirements such as PCI DSS that mandates data-at-rest encryption, the configuration of the Oracle SFTP service for the deployment will employ the use of whole disk encryption, or the service will be designed to accept incoming encrypted data files with an Oracle provided public key or x.509 certificate. Conversely, if the service offering has outbound data and file transfer integrations, then You must provide Oracle with a bonafide x.509 certificate for SFTP data integrations.

Encryption Requirements – Transport

Industry security standards and Oracle security policies mandate end-to-end (socket-to-socket) based transport encryption for data exchange. Use of FTP over SSL (FTPS) and FTP does not guarantee transport encryption is either properly enforced or negotiated during the initiation of the data connection, and the latter protocol (FTP) is completely lacking any transport encryption. Therefore, Oracle data transfer standards is limited to SFTP with the goal of ensuring confidentiality of data transfers between Oracle and You.

6. Compliance

Audit Reports

Audit reports and letters of compliance for Oracle Cloud Services are periodically published by Oracle's third party auditors. Reports and letters may not be available for all services or at all times. You may request a copy of the current published audit report or letter available for a particular Oracle Cloud Service, as applicable, by contacting the Oracle Sales Representative or designated Oracle account contact and providing the following information:

- Company name
- Contact name
- Title
- Recipient e-mail address
- Request justification (e.g., purpose and intended use description)

7. Oracle Utilities Opower Cloud Services

For details regarding specific Oracle Utilities Opower Cloud Services, please refer to the Oracle Utilities Opower Service Descriptions.

7.1 Change Management

Application Upgrades and Updates

For Oracle Utilities Opower Cloud Services, Oracle schedules application upgrades between 11:00 – 15:00 Eastern US time every third Sunday. Customer notifications are sent 72 hours in advance of such upgrades.

Core System Maintenance

For Oracle Utilities Opower Cloud Services, Oracle schedules core system maintenance between 03:00 – 07:00 Eastern US time on the last Thursday of each month. Customer notifications are sent 72 hours in advance of such upgrades.

7.2 Access Control

Privilege Management

In lieu of a bastion host, Oracle Administrative access to the Oracle Utilities Opower Cloud Services environment requires administrators to first connect to a trusted network to be able to access the systems. Access to the trusted network requires physical access to the network or authentication to the network by means of a username and password. All access to the trusted network from remote locations requires multifactor authentication.

The Oracle logo, consisting of the word "ORACLE" in white, uppercase, sans-serif font, centered within a red rectangular background.

7.3 Communication and Operations Management

Backups

The Data Integration Platform components of the Oracle Utilities Opower Cloud Services includes customer AMI (or “smart meter”) data which is not backed up to disk or tape. Instead, disaster resiliency for this component relies on a data replication strategy. Non-personally identifiable AMI data resident within this component is automatically replicated to a standby cluster within the same jurisdictional region on a daily basis. Personally-identifiable information is handled in a manner consistent with the requirements specified in the Backups section of the Oracle SaaS Security Practices document.

Daily backups are used to recover Oracle Utilities Opower Services in the event of a disaster. Oracle operates only one data center in Canada. Backups for disaster recovery purposes are stored in an encrypted format at a secondary site in the United States.

8. Oracle Textura & Primavera Cloud Services

For details regarding specific Oracle Textura Cloud Service or Oracle Primavera Cloud Services, please refer to the applicable Service Descriptions at www.oracle.com/contracts.

8.1 Change Management

Application Upgrades and Updates

- Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service**
 - For the Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service US Instance, Oracle schedules application upgrades between 07:00 – 11:00 Eastern US time every first and third Sunday.
 - For the Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service AU Instance, Oracle schedules application upgrades between 07:00 – 11:00 Eastern US time every first and third Sunday.
 - For the Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service EU Instance, Oracle schedules application upgrades between 16:00 – 20:00 Eastern US time every Monday following the US/AU application upgrade.
 - For the Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service US Instance, Oracle schedules application patches between 00:00 – 01:00 Eastern US time (Monday – Friday).
 - For the Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service AU Instance, Oracle schedules application patches between 09:00 – 10:00 Eastern US time (Monday – Friday).

* Oracle Textura Pre-Qualification Management Cloud Service is targeted for release in late spring 2018.

- For the Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service EU Instance, Oracle schedules application patches between 16:00 – 17:00 Eastern US time (Monday – Friday).
- Oracle Textura Pre-Qualification Management Cloud Service*
 - For the Oracle Textura Pre-Qualification Management Cloud Service*, Oracle schedules application upgrades between 23:30 – 03:30 Eastern US time on the Friday before the second Sunday of each month.
 - For the Oracle Textura Pre-Qualification Management Cloud Service*, Oracle schedules application patches between 23:30 – 03:30 Eastern US time every Friday.
- Primavera Submittal Exchange Cloud Service
 - For the Primavera Submittal Exchange Cloud Service, Oracle schedules application upgrades between 20:00 – 23:00 Eastern US time every weekday.

Core System Maintenance

- Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service
 - For the Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service US Instance, Oracle schedules core system maintenance between 07:00 – 11:00 Eastern US time every first and third Sunday.
 - For the Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service AU Instance, Oracle schedules core system maintenance between 07:00 – 11:00 Eastern US time every first and third Sunday.
 - For the Oracle Textura Payment Management Cloud Service and Textura Early Payment Direct Cloud Service EU Instance, Oracle schedules core system maintenance between 16:00 – 20:00 Eastern US time every Monday following the US/AU core system maintenance.
- Oracle Textura Pre-Qualification Management Cloud Service*
 - For the Oracle Textura Pre-Qualification Management Cloud Service*, Oracle schedules core system maintenance between 07:00 – 11:00 Eastern US time every Sunday.
- Primavera Submittal Exchange Cloud Service
 - Oracle schedules core system maintenance between 09:00 – 11:00 Eastern US time every Sunday and 20:00 – 23:00 Eastern US time every weekday.

8.2 Termination Policy

Oracle Textura Cloud Services:

After termination or expiration of the Oracle Textura Cloud Services under Your order, or upon termination of the retrieval period following such Cloud Services, Oracle will disable Your access to the production Oracle Textura Cloud Services environment and will delete Your Personal Data (as that term is defined in the Data Processing Agreement for Oracle Cloud Services) relating to You residing in the production environment, except as may otherwise be required by law. . Users and other third parties who are enabled

** All references to Textura Early Payment Direct Cloud Service in the Change Management section above also apply to Textura Early Payment Cloud Service.

to interact with Your the production Oracle Textura Cloud Services environment may continue to access the environment and any data (including Your transactional data, Your invoice history, Your project history, etc.) that is not Personal Data relating to You.

For a period of no less than 60 days after the termination or expiration of the Oracle Textura Cloud Services under Your order, Oracle will make available Your production data via secured protocols, or keep Your access to the production Oracle Textura Cloud Services environment accessible, for the purpose of data retrieval by You. During this period, You should not use the environment for production activities. Oracle has no obligation to retain your data after this 60 day period.

Textura Payment Management (including Textura Early Payment Cloud Service and Textura Early Payment Direct Cloud Service)

Following the date on which Oracle determines that both (i) all Projects, Contracts and Invoices managed on the cloud service have been paid in full and (ii) no Users from the related organization have logged in to Your production Oracle Textura Cloud Services environment for 180 days, Oracle will send an email notice, to any User with administrator rights to the environment, indicating that all Personal Data, of any User, that is in the environment will be deleted or rendered unrecoverable unless a User logs in to the environment within 30 days from the date of the email notice. If no User logs in to the environment within 30 days of the date of the email notice, then all Personal Data, of any User, that is in the environment will be subsequently deleted, except as may otherwise be required by law.

Primavera Submittal Exchange Cloud Services

Following the data retrieval period Oracle may retain Your data, included Personal Data, for at least an additional 180 days to allow for reasonable restoration or recovery of Your Primavera Submittal Exchange Cloud Services. Restoration of Your production Cloud Services may be requested by You, Users, or other third parties who were enabled to interact with Your production Primavera Submittal Exchange Cloud Services environment at the time of expiration of Your Cloud Service. Restoration of services may be subject to additional cost and fees. If no request(s) for restoration are received by Oracle with 180 days following the data retrieval period, all Personal Data, of Any User, relating to the production environment will be deleted or rendered unrecoverable, unless otherwise required by law. Oracle has no obligation to retain Your data during this 180 day period. Any request for production Cloud Service restoration submitted to Oracle, even within the 180 day period following the data retrieval period, does not ensure the Cloud Service will be restored, and Oracle has not obligation to fulfill any such request.

8.3 Backups

Oracle Primavera Submittal Exchange data is backed up in real-time to a site separate from that at which the instance is running and may be used as recovery data in the event of a disaster. Backups of Database files are also synchronized to the same separate location site at least once an hour. All data is encrypted during synchronization.

9. Oracle Health Sciences Site Select, Site Activate, and Site Analyze Cloud Services

9.1 Change Management

Application Upgrades

Single tenant applications

For upgrade of applications dedicated to the customer e.g.; Site Activate, Oracle will work with the customer to identify a mutually agreed date and time when the upgrade will take place. This applies to Production and non-Production environments. Note: Upgrades may require downtime to the environment.

Multi tenant applications

For upgrades to applications that are shared by multiple customers, Oracle will inform the customers the date and time when their environment will be upgraded. Notice will be provided at least five (5) business days in advance. This applies to Production and non-Production environments. Note: Upgrades may require downtime to the environment.

System Maintenance

Oracle maintenance window is 1st and 3rd Saturday of each month, 8:00 -11:00 PM Pacific US time. This window is used to do any system and infrastructure maintenance tasks like OS upgrades, applying security patches, database maintenance etc.

9.2 Secure File Transfer Protocol (SFTP) Password Policy

For the purpose of file transfer of customer's data, accounts in Oracle sftp server will be provisioned, upon written request (e.g., ticket, etc), for customers to upload and download file to that sftp server. These accounts are not intended for individual access, but rather for system integration purposes to customer software instances. The credentials for accessing the sftp server will be sent via email to the technical customer's designated point of contact. The password for the sftp server will be at least 8 characters long with at least one of each:

- lower case alphabet
- upper case alphabet
- number
- special character.

When passwords are changed by Oracle, the change will be communicated to the customer in advance via email notification.. When customer requests the password to be changed, Oracle will identify a new password and the new password and date and time it will be changed will be communicated to the customer. Sftp accounts will be removed as part of service termination or upon customer request.

In limited situations, Oracle will use customer's sftp server. In such cases, customer will govern the password policy and it is shared with Oracle. Changes to passwords will be communicated to Oracle in advance.
