How to engage with Oracle

General Enquiries

Raise general enquiries directly with your Oracle contact i.e. account manager, sales representative, partner manager, client manager or service delivery manager, or contact Oracle direct on (0870) 53 32 200 or e-mail uksales_ie@oracle.com

Complaints & Feedback

If you are unhappy with the level of service you are receiving from Oracle with regard to any issue, technical or non-technical, or you wish to give feedback or praise, you can either inform your usual Oracle contact or contact the Customer Feedback Hotline on (0870) 55 03 080 or e-mail customer_uk@oracle.com

Here, your feedback will be logged, the appropriate management attention given and we will strive to resolve the matter to your satisfaction.

Technical Support Issues for PeopleSoft and JDE Products

Technical Issues

Technical issues and the Escalation Process are defined in our Guide to Problem Resolution and can be found on Customer Connection in Support -> Troubleshooting via the link www.oracle.com/support/support_peoplesoft.html

Service Request Severity Level

In addition to recording information about a technical problem, we also indicate its severity level. Severity Levels are assigned according to the impact of the problem. This is different from the Service Request Escalation which focuses on appropriate management attention. Each severity level is described in more detail in the Software Support Services Terms and Conditions document on Customer Connection under the Support Policy section. The severity level is indicated in the case header and can be viewed on Customer Connection via On-Line support, Manage Existing Cases.

Service Request Escalation

If the service you are receiving relating to a specific technical case is not meeting your expectations, firstly check that the analyst fully understands the impact of the problem. If progress is still unacceptable, then you may ask for the case to be escalated to the next level of management. Escalation will focus the appropriate management attention on your problem and ensure that resources are used effectively towards the resolution of that problem.

Outside Normal Business Hours

Please log your service request via Customer Connection www.oracle.com/support/support_peoplesoft.html
Or call technical support on 0800 731 3238 and select option 1.

Business Support Issues for PeopleSoft and JDE Products

Business Issues

For all non-technical queries please contact Customer Care on 0800 731 3239 and select Option 2. The Customer Care team will be able to assist you with access to Customer Connection, navigation around Customer Connection, software upgrade orders and any other business related queries.

Oracle Technical Support Issues

Technical Issues

Technical issues are defined in our Technical Support Policies and Technical Service Request Escalation process – described in the Oracle Support Services Customer Guide at www.oracle.com/uk/support/custguide

Service Request (SR) Severity Codes

In addition to recording information about a technical problem, we also indicate its severity level. Severity levels are assigned according to the impact of the problem. This is different from service request or case escalation (see below), which focuses on appropriate management attention. Each severity level is described in more detail in the Oracle Support Services Customer Guide. The severity level is indicated in the SR header, which you can view in the SR section of OracleMetaLink at metalink.oracle.com

Service Request (SR) Escalation

If the service you are receiving relating to a specific technical SR is not meeting your expectations, firstly check that the support engineer fully understands the impact of the problem and that the SR is recorded as URGENT (this is either Severity 2 for urgent or Severity 1 for issues with critical business impact or system down). If progress is still unacceptable, then you may ask (directly or via MetaLink) for the SR to be escalated to a team leader, and, if the SR still does not receive appropriate attention, to the team leader's manager. Escalation will focus the appropriate management attention on your problem, and ensure that resources are used effectively towards the resolution of that problem.

Outside Normal Business Hours

You can use OracleMetaLink, call the technical product support number (0870) 40 00 900 or call our switchboard number (0118) 92 40 000 and ask to speak to the duty manager.
