

Sustainable Procurement Statement

Scope

Oracle's commitment to Global Citizenship includes our procurement activities. We recognize that purchasing decisions present an opportunity to have both a social and environmental impact, which supports doing business in a responsible and sustainable manner.

Oracle's values around Sustainability Procurement include, but are not limited to, the following:

Legal and Regulatory Compliance:

- All companies doing business with Oracle must ensure that their operations are in compliance with applicable laws and regulations. Additionally, they must agree to abide by our [Supplier Code of Conduct](#), which reflects our company's expectations about ethical business and employment practices.

Environmental Performance:

- With the co-operation of our employees, customers, contractors, and suppliers, we are committed to environmental management and we incorporate environmental considerations into our procurement processes.
- Oracle gathers and evaluates key suppliers' environmental performance data to make informed choices, assess options with lower environmental impact and review the environmentally preferable offerings of existing suppliers.

Procurement Integrity:

- Oracle is committed to ethical business conduct and the responsible sourcing of materials throughout our global supply chain. On issues ranging from factory safety to conflict minerals, we work in our own hardware supply chain and across our industry to advance responsible practices.
- Oracle's direct hardware suppliers must also acknowledge their commitment to the [EICC Supplier Code of Conduct](#), which is designed to promote worker safety and fairness, environmental responsibility and ethical business.

Oracle rigorously observes fair business practices to promote and protect healthy competition. Through our partnerships and industry collaborations, Oracle strives to make effective changes in labor, human rights, health, safety and environmental practices.
