

# Making ESG part of everyday business

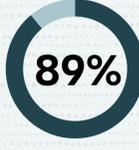

ESG initiatives have become a major driver of capital and corporate policies, and a chance to make a positive impact on the world and your business. The role of CFO is changing from being a business partner to a key stakeholder, leading the organisation's transition towards a sustainable enterprise.

“ ESG is not a reporting challenge. It is a data challenge. ”

## Sustainability is crucial for corporate strategy

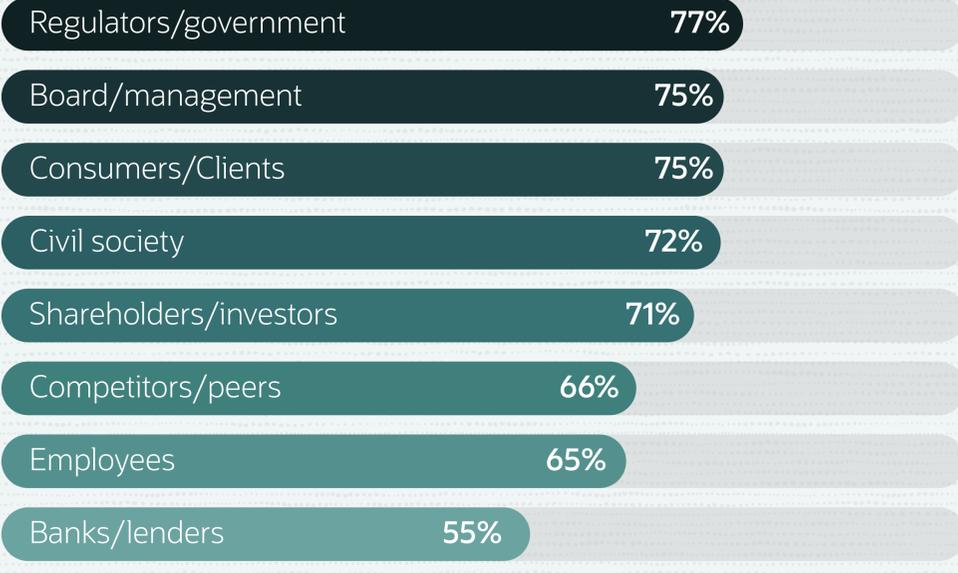

People believe that sustainability and social factors are more important than ever <sup>1</sup>

People believe its not enough for business to say they prioritise ESG, they need to show action and proof <sup>1</sup>

Demand for transparency of climate and social risk exposure adding pressure <sup>2</sup>

## From Chief Financial Officer to Chief Performance Officer

## Key Challenges

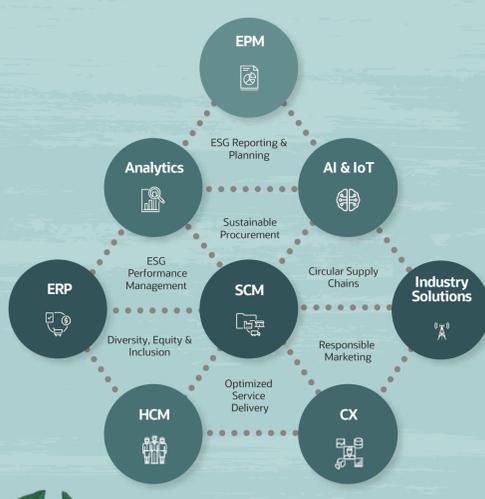

## Gain control of your ESG data

## @Oracle, we are operationalizing sustainability

Embedding sustainability in our business and yours. We are building ESG into the data structure of finance, manufacturing, operations, procurement and human resources.

Instead of passing large volumes of data between systems (increasing costs to store, process, reconcile and reducing time to value). **Oracle distributes the data across a single SaaS platform to access the data across a single point of granularity and makes ESG part of everyday business.**

Spend more time becoming ESG compliant while making the world a better place with Oracle.
