

goBalto Select

Optimizing Site Selection

With inconsistent site profile and performance information spread across various systems finding and enrolling qualified sites has become a manual, complicated and lengthy process.

Meet Enrollment Targets

Competition for sites and enrollment issues has led to an increase in the number of non-active, non-enrolling (NANE) sites being activated for clinical trials, which negatively impacts study budgets and timelines.

goBalto Select combines internal and external data sources to create a complete target site profile that enables evidence-driven site selection processes.

With goBalto Select, you can:

- Find optimal alignment of top-performing sites with high patient availability.
- Quickly assess sites' study history on a variety of performance categories.
- Profile patient populations to design and tune protocols.

Shorten Cycle Times

With the number of amendments, endpoints and eligibility criteria on the rise, protocols have become increasingly complex, which has created challenges with site feasibility assessments.

goBalto Select mitigates this problem by allowing you to:

- Use integrated workflows to complete all site identification and selection.
- Reuse site profile data to maximize accuracy of data.
- Improve site screening by displaying metrics tailored to your selection criteria.

“goBalto Select simplifies the process of finding investigative sites by ensuring optimal fit and its integrated workflows allow our globally-dispersed clinical research teams to collaborate in real-time. Investigate sites can then be quickly setup to enroll trial subjects using goBalto Activate.”

Actionable Insights

Reporting shows how you are doing in your site recruitment vis-à-vis target site numbers, and aiding productivity improvements. Additionally, goBalto Select links to other reporting modules in goBalto Analyze to help drive data-based business decisions.

goBalto Select is the only solution that enables site selection based on data-driven performance metrics, ensuring the best match to your study.

Facilitate Global Collaboration

Outsourcing of clinical trials has led to a reliance on global affiliates, which has increased the complexity of trial management. In addition to tracking the volunteer-to-screen rate and other critical success metrics, global affiliates must understand all local processes and approvals. With this increase in outsourcing, the need for transparency and the centralization of information has never been greater.

goBalto Select automates the manual process of getting sites selected. The site recommendation engine streamlines centralized management and reuse of site profile data, enabling scorecards, ranking, and prioritization of those sites applicable to the study of interest. Profiling and ranking can be conducted at the site and country levels, making the process easier for everyone involved.

With goBalto Select, you can:

- Drive data-based business decisions and transparency.
- Provide site selection data for regulatory compliance.
- Mitigate recruitment and retention risks.

Oracle Health Sciences

Oracle Health Sciences breaks down barriers and opens new pathways to unify people and processes, helping to bring new drugs to market faster. As the #1 provider of eClinical solutions (Everest Group, 2017), and powered by the #1 data management technology in the world (Gartner, 2018), Oracle Health Sciences is trusted by 29 of the top 30 pharma, 10 of the top 10 biotech, and 10 of the top 10 CROs for clinical trial and safety management around the globe.

MEET YOUR TARGETS

With a data-oriented approach to weighing selection and performance variables, sponsors and CROs can identify sites and target populations ideally suited for their studies.
