

A Future for Every Child

Just an ordinary day in Pakistan,
Preventable diseases threaten the lives of children so young.
Families torn apart,
Leaving scars in the heart.

So, for 10 years a solution we sought to find,
With a single goal in mind.
For those who could not go elsewhere,
In communities untouched by healthcare.

Providing a full spectrum of medical services,
Countless lives shaped anew.
From emergency rooms, to primary clinics and preventive practices,
Our healthcare network grew.

Now with 21 hospitals, 10 emergency rooms, and 11 telemedicine satellite centres,
The increasing workloads is pushing the limits of our systems' inventors.
Turning to Oracle Cloud Infrastructure,
We experienced a complete restructure.

Maximising the availability of data and applications, better health outcomes we found.
Focusing on performance and scalability, significant savings around.
In placing our trust in Oracle,
We hope to make more children smile.

“Preventable deaths claim the lives of hundreds of children annually in Pakistan, with pneumonia alone killing 92,000 children annually. Our aim is to save as many of them as possible by making rapid access to free-of-cost and quality emergency medical care possible across the country. Knowing that our hospital management system application is running on a reliable, performant and secure cloud like Oracle Cloud gives us peace of mind and allows us to ensure that the majority of our funding goes towards delivering an efficient healthcare system.”

Dr. Ahson Rabbani
CEO - ChildLife Foundation
