

# Oracle Retail Reference Model

The **Oracle Retail Reference Model (RRM)** is a collection of detailed implementation information for our customers and partners. It includes business process models, technical models, and more. It was created to impart valuable information to Oracle Retail’s customers and partners to maximize the value derived from our software and accelerate implementations. Not only do our customers get software from us, but they also have a wealth of information to help accelerate their implementations. The three components of the RRM are described further below.

## Key Benefits

- Available at no cost to Oracle Retail customers.
- Supports a vanilla implementation methodology.
- Eases communication between business and IT.
- Helps to identify system dependencies and which activities are done within Oracle Retail solutions.
- Allows retailers to quickly assess the current state and identify potential gaps.
- Educates employees with change management initiatives.
- Serves as a blueprint for future growth, allowing retailers to focus internal energies on creating end-to-end differentiated processes.

## PROCESSES HELP ANSWER “BIG PICTURE” QUESTIONS

The Oracle Retail Business Process Flows are a comprehensive collection of established, industry-leading business processes that guide retailers and implementers on using Oracle Retail solutions. The flows are based on the input and experience that Oracle Retail has gained in working with a broad range of retail customers and partners. The processes align with Oracle solutions, leverage industry standards, and help business units communicate with Information Technology (IT). Process flows are created in Microsoft Visio to enable retailer-specific business processes to be managed and maintained.

## DIAGRAMS FOR LEADING FUNCTIONAL DISCUSSIONS

The Oracle Retail Technical Models are a collection of process flows that describe Oracle Retail solutions. These views help implementers understand how Oracle Retail solutions fit together. The models include Oracle Retail’s Solution Suite overview, as well as integration perspectives by Function and by Solution Domain. Those implementing Oracle Retail’s products will find the Technical Models a useful starting point in understanding how Oracle Retail solutions fit together and will work with retailer legacy solutions. The diagrams show the integrations in functional areas (such as transfers and customer journeys) and solution domains, showing how various Oracle Retail solutions work together or with typical third-party solutions.

## GLOSSARY FOR RETAILER TEAMS TO QUICKLY ALIGN

The Retail Glossary provides a single source for defining terms, metrics, and measures used by retailers. Users can search for a term to understand its definition, calculation, synonyms, and context, thus helping to align departments and provide consistency. The Glossary is also accessible in Microsoft Excel format, allowing users to customize it easily by adding, editing, or deleting content.

# ENHANCEMENTS IN THE LATEST RRM RELEASE

The Oracle Retail Reference Model (RRM) has been updated. Release 24.1.202.0 features major updates to content within all three components of the RRM:

The screenshot displays the Oracle Retail Reference Model (RRM) interface. At the top, there is a navigation menu with 'Business Process Flows', 'Technical Models', and 'Glossary'. Below this, three main content areas are visible: 'Business Process Flows' with a flowchart, 'Glossary' with a table of terms, and 'Technical Models' with a diagram of integration models. Each section includes a brief description and a link to the corresponding content. The version number 'Version 23.2.402.0' is displayed at the bottom of each section.

## Notable Release Updates

- *New Business Process Flow (BPF) views supporting the Oracle Retail Fiscal Management, Oracle Retail Customer Engagement, and Oracle Retail Order Management Suite Cloud Services.*
- *Simultaneous release of translated BPFs in French, Spanish, and Brazilian Portuguese.*
- *New Technical Model (TM) content supporting Oracle Retail Fiscal Management and Oracle Retail Collect And Receive Cloud Service.*
- *New access to the RAP Cloud Services Data Interfaces from the Technical Model main pages (see the 'Reference Links' sections).*
- *New content was added to the Glossary to support the Oracle Retail Collect and Receive Cloud Service.*

The RRM is available to customers directly via Oracle Retail Home Cloud Service on the Oracle Next Gen Platform.

For local download, visit Oracle Support at <https://support.oracle.com>. Then once logged in, query KB note 3017928.1, where you will have access to information on what's new with this release and access to download the download patch ID 36534513.
