Oracle Fusion Cloud Service
Oracle Fusion Suite Cloud Service
Subscription Services Pricing

Minimum requirements for a customer to be eligible for Fusion Suite pricing:
- o No Mix or Match - Fusion Suite components cannot be purchased à la carte; you must buy additional base licenses.
- o Contract terms of 36+ months.

	Monthly Subscription Price	Metric	Minimum	Part Number
Oracle Fusion Suite Bases				
Oracle Fusion Suite Professional Cloud Service	330.00	Hosted Named User	10	B108674
Oracle Fusion Suite Employee Cloud Service	5.00	Hosted Employee	500	B108675
Oracle Fusion Suite Professional Options				
Oracle Fusion Accounting Hub Cloud Service	10.00	Hosted 1,000 Records	500	B87855
Oracle Fusion Product Management Reviewer Cloud Service	100.00	Hosted Named User	50	B95242
Oracle Fusion Risk Assurance Cloud Service for Fusion Suite	25.00	Monitored Account	100	B113294
	Per Unit Price			
Oracle Fusion Digital Customer Service Cloud Service	70.00	1,000 Pooled Sessions	10	B96469
	Monthly Subscription Price			
Oracle Fusion Partner Relationship Management for Partners Cloud Service	20.00	Hosted Named User	10	B112938
Oracle Fusion Data Quality Cloud Service	10.00	Hosted 1,000 Records	1	B91072
Oracle Additional Application for Oracle Enterprise Performance Management for Fusion Suite Cloud Service	6,250.00	Hosted Environment	1	B108677
Oracle Fusion Incentive Compensation for Fusion Suite Cloud Service	75.00	Compensated Participant	500	B108678
Oracle Fusion Permitting and Licensing for Fusion Suite Cloud Service	625.00	Hosted Named User	40	B108685
Oracle Fusion Student Management for Fusion Suite Cloud Service	7.00	Hosted FTE Student	2,000	B108688
Oracle Fusion CPQ Channel User Cloud Service	35.00	Hosted Named User	50	B111752
Oracle Fusion CPQ External API Access Cloud Support	500.00	1,000 Interactions	10	B111753
Oracle Fusion CPQ Connector Cloud Service for Salesforce	5.00	Hosted Named User	-	B111754
Oracle Fusion CPQ Connector Cloud Service for Salesforce External User Pack	5.00	10 External Connector Users	-	B111755
	Per Unit Price			
Oracle Commerce for CPQ Cloud Service	450.00	1,000 Pooled Sessions	900	B110678
	Monthly Subscription Price			
Oracle Customer Experience for Utilities - Fusion Sales for Fusion Suite Cloud Service	350.00	Hosted Named User	10	B108684
Oracle Customer Experience for Utilities - Fusion Agent Service for Fusion Suite Cloud Service		Billable Service Customer	10,000	B108683
Up to 125,000 Billable Service Customers	0.360			
125,001 to 250,000 Billable Service Customers	0.330			
250,001 to 750,000 Billable Service Customers	0.320			
750,001+ Billable Service Customers	0.300			
	Annual Subscription Price			
Oracle Fusion Subscriptions Management for Fusion Suite Cloud Service	6,000.00	1,000 Subscriptions	10	B108679
Oracle Fusion Subscriptions Management for Fusion Suite Cloud Service	10.00	1,000 in ARR	5,000	B108680
	Monthly Subscription Price			
Oracle Fusion Suite Employee Options				
Oracle Fusion Learning Cloud Service	5.00	Hosted Named User	500	B85242
Oracle Fusion Learning Connect Cloud Service	2.00	Hosted Named User	500	B95657
Oracle Fusion Talent Management Cloud Service	7.00	Hosted Named User	500	B94925
Oracle Fusion Time and Labor Cloud Service	3.00	Hosted Named User	500	B75365
Oracle Fusion Touchpoints Cloud Service	2.00	Hosted Named User	500	B95573
Oracle Fusion Workforce Scheduling Cloud Service	7.00	Hosted Named User	500	B98207
Oracle Fusion Workforce Labor Optimization Cloud Service	3.00	Hosted Managed Resource	500	B107959
Oracle Fusion Recruiting Cloud Service	8.00	Hosted Employee	500	B87675
Oracle Fusion Recruiting Booster Cloud Service	3.00	Hosted Employee	500	B95763
Oracle Fusion Payroll Cloud Service for Canada	7.00	Hosted Compensated Individual	500	B110323
Oracle Fusion Payroll Cloud Service for China	7.00	Hosted Compensated Individual	5,000	B110327
Oracle Fusion Payroll Cloud Service for France	7.00	Hosted Compensated Individual	5,000	B109618
Oracle Fusion Payroll Cloud Service for Gulf Cooperation Council (GCC)	7.00	Hosted Compensated Individual	500	B110326
Oracle Fusion Payroll Cloud Service for India	7.00	Hosted Compensated Individual	500	B110328
Oracle Fusion Payroll Cloud Service for Ireland	7.00	Hosted Compensated Individual	500	B109619
Oracle Fusion Payroll Cloud Service for Mexico	7.00	Hosted Compensated Individual	500	B110324
Oracle Fusion Payroll Cloud Service for United Kingdom	7.00	Hosted Compensated Individual	500	B110325
Oracle Fusion Payroll Cloud Service for United States	7.00	Hosted Compensated Individual	1,000	B110322
Oracle Fusion Payroll Core Cloud Service	5.00	Hosted Compensated Individual	500	B110329

Oracle Cloud Service
Oracle Cloud Professional Services

Pricing for different countries for the professional services offerings listed below is represented in six different Country Zones (Country Zones AA through E). Each Country Zone includes a list of countries and represents the pricing for each country (based on each country's currency). All Country Zone pricing is based on a percentage of the price point listed in the "Base Price (in U.S. dollars)" column, which is then translated into that country's currency (based on Oracle's Local Pricing Exchange Rates). The "Base Price (in U.S. dollars)" is not the price for any of the professional services offerings, but is the price that is used to calculate the Country Zone prices.

		Country Zone AA	Country Zone A	Country Zone B	Country Zone C	Country Zone D	Country Zone E

Definitions

1 Billion Pooled Processed Records: is defined as 1 billion pooled processed records as shown in Fusion Data Intelligence. Each month, Your available pool of 1 billion pooled processed records is reduced by the amount of 1 billion pooled processed records consumed from your pool.

1 Billion Pooled Tokens: is defined as a pool of 1 Billion AI tokens. Each month Your available pool of AI Tokens is reduced by the number of input tokens sent plus output tokens generated by the LLM, beyond any base level of AI tokens that may be included with Your Oracle Cloud Services or subscriptions.

1 Million Messages: is defined as the number of 1,000,000 message quantities per month used as part of the Oracle Cloud Service. A message is defined as up to 50 Kb of in-and-out transmission from/to the Oracle Cloud Service. Any messages over 50 Kb in size must be counted as multiple messages, with each 50 Kb or portion thereof counting as equivalent to one message (e.g., 210 Kb would be counted as five messages). Each named user for the process automation and/or the Visual Apps features is equal to 5,000 messages.

100 Appointments: is defined as 100 individual activities (e.g., work order, office visit, time used to assist another resource, lunch break, etc.) scheduled within the applicable service that Your resource (e.g., mobile employee) performs at a specific location.

500 Hosted Trading Partners: is defined as up to 500 unique trading partner relationship records (active or inactive) for an individual customer that allow for electronic message transmission between the parties.

1,000 Interactions: is defined as the maximum of 1,000 Interactions per each month of the Services Period.

For the purposes of Mobile Messaging Cloud Service, an interaction is defined as a mobile message delivered to or received from an end-customer device, regardless of the originating product or service that utilizes the Mobile Messaging channel. Oracle will calculate the total number of Interactions during each calendar month and decrement that number from Your committed quantity of Interactions.

For the purposes of CPQ External API Access, an interaction is a single inbound API call to the API framework associated with a CPQ Webservices user. An Oracle CPQ Webservices user is a dedicated non-human user account configured within the Oracle CPQ environment and granted specific permissions to interact with the CPQ application programmatically via SOAP or REST APIs. This user is restricted to system-to-system integration(s).

For the purposes of Intelligent Advisor, 1,000 Interactions means 1,000 advice interactions with Intelligent Advisor in a 12-month period. For the purposes of this metric,

- One Intelligent Advisor interview session by a single user = one advice interaction
- 20 Intelligent Advisor Determinations API assessments = one advice interaction

For Intelligent Advisor interview sessions:

- An interview session is conducted by a single user over any continuous duration. After a period of inactivity, interview sessions end automatically, and upon resumption will be treated as an additional interview session.
- Interview sessions, conducted by a logged in Fusion Sales and Service agent user, are considered non-metered usage, and do not count as an advice interaction for the purposes of this metric.

One Intelligent Advisor Determinations API assessment corresponds to the following:
- An invocation of the Determinations API Assess Service Simple Object Access protocol (SOAP) Assess action
- An invocation of the Determinations API Answer Service Simple Object Access Protocol (SOAP) GetAnswer action
- Each individual case POSTed to the Determinations API Batch Assessment Representational State Transfer (REST) Service endpoint

Note that an assessment is deemed to have occurred even if the provided data cannot be processed.

If a policy model has been constructed such that multiple independent assessments are processed together (e.g., unrelated customers or unrelated incidents), each independent assessment processed via the policy model will be counted separately for the purposes of Oracle Intelligent Advisor Cloud Service.

1,000 Pooled Sessions: is defined as 1,000 Sessions per Service Period. Oracle will sum the sessions each calendar month and decrement that amount from the total session pool.

For purposes of Digital Customer Service (DCS), a Session is a unique individual who accesses the service during a defined period using a specific channel (e.g., web site, mobile application) and is identified through the use of cookie, device ID, IP, or session ID. Access across multiple channels counts for multiple sessions. The defined period is not to exceed 24 hours.

For purposes of Commerce for CPQ, a Session is a unique individual who accesses the service during a defined period using a specific channel (e.g., web site, mobile application) and is identified through the use of cookie, device ID, IP, or session ID. Access across multiple channels counts for multiple sessions. The defined period is not to exceed 30 minutes.

For purposes of Customer Data Platform (CDP), a Session is a collection of events sent to Oracle from a customer's environment (e.g., web site, mobile application, and other digital properties). A session does not exceed 30 minutes of inactivity, 120 minutes of activity, or 500 events, whichever occurs first. Oracle associates all of the events collected within a single session that can be attributed to the same user or device across channels.

1,000 in ARR: is defined, for the purposes of Oracle Subscription Management Cloud Service, as one thousand U.S. dollars (or the equivalent amount in local currency stated in the order) of the total subscriptions ARR in a given period processed by Oracle Subscription Management Cloud Service.

1,000 Page Views: is defined as 1,000 requests to load a URL by an end user's web browser. For the purposes of this metric, a new Page View is deemed to have occurred in each of the following cases:

- The first URL request of an end-user web session.
- When multiple URL requests occur within a single end user's web session, every URL request which is different from the URL request immediately preceding it.
- Each URL request resulting from a forced page reload by the end user's web browser.

1,000 Profiles: is the number of entities, (e.g., end-customers, accounts, contacts, prospects, etc.), that result from profile unification. Multiple sources of data (e.g., CRM, marketing, sales, support, service, etc.) can be imported into Fusion Customer Data Platform and profiles are unified from these multiple sources of data based on configurable deduplication and promotion rules.

1,000 Sessions: is defined as 1,000 Sessions where Session is defined as a unique individual who accesses the Oracle Digital Assistant (ODA) through a specific channel (such as Slack, web client, Microsoft Teams, etc.), and can have as many interactions with the ODA through that channel until the user has closed the chat client or after the session has timed out (maximum value equals 24 hours).

1,000 Subscriptions: is defined as 1,000 subscription lines where each is an individual, billable service, or managed asset with recurring billing processed by Oracle Subscription Management Cloud Service.

10,000 Contacts: is defined as 10,000 unique records in the contact table, consisting of the identity of a lead, prospect, customer, or person to whom you are directing marketing activities.

10,000 Pooled Order Lines: is defined as order line items processed by the Cloud Service during the Services Period. The Pooled Order Lines are pooled for the Services Period stated on the Order Document. Order Line consumption may vary each month. If the order line count as specified in Your contract is depleted, more must be purchased before the Services Period End Date.

100,000 Pooled Fusion AI Units: is defined as 100,000 Fusion AI (Artificial Intelligence) Units for use during the Services Period. A Fusion AI Unit is a measure of value of certain AI services as defined in the Fusion AI Unit Actions Table.

The 100,000 Pooled Fusion AI Units are pooled for the Services Period stated on the Order Document. Fusion AI Unit consumption may vary each month. If the Fusion AI Units as specified in Your order are depleted, You must replenish Your Fusion AI Units before the Services Period End Date or discontinue usage that consumes additional Fusion AI Units.

Oracle will sum up the Fusion AI Units used each calendar month and decrement that amount from the total available Fusion AI Units (after first decrementing any non-pooled Fusion AI Unit allocations that You may have). Any AI Units purchased under Your order that remain unused or unapplied at the end of the Services Period will be deemed forfeited, and there will be no reduction in fees or reimbursement due to such forfeiture.

100K Subscribers: is defined as 100,000 individuals who are authorized by You to use one or more of Your licensed services with which the Oracle Fusion Customer Experience for Communications services listed herein (the "CX4C Cloud Services") are used.

For example, an individual subscriber may be tracked as a customer record/account in Your licensed service or other related subscriber databases such as a customer master, ordering system, etc. An individual subscriber is counted once, regardless of the number of licensed services used.

For CX4C Cloud Services, an individual subscriber is defined as an individual that purchases one or more licensed services from the service provider that utilizes launch, buying or care capabilities of the applicable service.

Definitions (continued)

AI Agent: An AI Agent is a software entity that can be assigned a task, examine its environments, take actions as prescribed by its roles, and adjust based on its experiences.

AI Token: An AI token is a unit of content input or output (referred to as "Input Tokens" and "Output Tokens", respectively) as counted by an LLM that is used as part of Your Oracle Cloud Services. A single token can be a unit of data processed by an AI system (e.g., an LLM), such as a word, partial word, or partial image, depending on how the AI system processes the data.

Billable Service Customer: is defined as the total number of Your and Your Affiliates' individual utilities services that are billable to each of Your and Your Affiliates' customers. If You will bill multiple utility services to one customer, each service will count as a single Billable Service. If a customer will be billed for utility services at multiple locations (e.g., a chain store, an apartment building, or a municipality), each utility service for each such location shall count as a single Billable Service. Examples of utilities customer Billable Service types include, but are not limited to, electric, gas, water, and waste water.

Compensated Participant: is defined as an active participant whose compensation or compensation calculations may be generated by the programs (even if zero dollars or non-monetary). Compensated Participants include, but are not limited to, Your employees, contractors, partners, retirees, and any other person or other entity (i.e., company).

Custom AI Agent: is any AI Agent either created with, or resulting from modification of Oracle delivered agents that are included with Your Oracle Cloud Service. Custom AI agents could result from modifications such as adding a tool, accessing an external service, accessing external tools through Model Context Protocol (MCP) servers, bringing Your own AI Large Language Model (BYO LLM), multimodal capabilities (e.g. image generation, voice, video), or otherwise altering the intended scope and purpose of the Oracle included agents.

50M Revenue Under Management (RUM), or Hosted 50M RUM: is defined as 50,000,000 U.S. dollars of all income (interest income and non-interest income), before adjustments for expenses and taxes, generated in the preceding 12 months by Your businesses that use the CX4C Cloud Services.

Hosted $M in Freight Under Management (FUM): is defined as 1,000,000 U.S. dollars (or the equivalent amount in local currency stated in the order) of the total transportation value of tendered orders for all shipments for a given calendar year during the term of the Oracle Transportation Management Cloud Service. FUM shall include the combined total of actual freight purchased by You, plus the cost of freight for shipments managed by You, and any transportation management services provided by You for Your clients. Freight that is paid by a third party shall also be included in the FUM total (e.g., inbound shipments from suppliers to You with the freight term of prepaid).

Hosted $M in Revenue: is defined, for purposes of Oracle Global Trade Management Cloud Service, as 1,000,000 U.S. dollars (or the equivalent amount in local currency stated in the order) in all income (interest income and non-interest income) before adjustments for expenses and taxes generated by You during a fiscal year.

Hosted 1,000 Records: is defined as 1,000 unique customer database records stored in the hosted service.

For the purposes of Fusion Customer Management Foundation for Organizations Cloud Service, a customer database record is a unique business entity or company record which is stored as an account or organization in the hosted service.

For the purposes of Fusion Customer Management Foundation for Persons Cloud Service, a customer database record is a unique consumer (i.e., physical person) record, which is stored as a contact or a person in the hosted service.

For the purposes of Fusion Data Quality Address Cleansing Cloud Service, the number of records should match the number of records of the Fusion Customer Management Foundation for Organizations Cloud Service and/or Fusion Customer Management Foundation for Persons Cloud Service ordered by You.

For the purposes of Fusion Data Quality Matching Cloud Service, the number of records should match the number of records of Fusion Customer Management Foundation for Organizations Cloud Service and/or Fusion Customer Management Foundation for Persons Cloud Service ordered by You.

For the purposes of Fusion Automated Invoice Processing Cloud Service and Fusion WebCenter Forms Recognition Cloud Service, a record is a unique invoice header, in the hosted service, entered during the month.

For the purposes of Fusion Product Hub Cloud Service, a product record is defined by a unique product that is used by an enterprise in the hosted service at any given time. A unique product record would include all items including but not limited to finished goods, phantom items, style items, SKU items, pack items, assemblies, components, model and option items but does not include any instance items (i.e. star items), or organization assignments, or revisions/versions of the same item, or items.

For the purposes of Fusion Product Hub Portal Cloud Service, a hosted product record is defined by a unique record that is uploaded through the Product Hub Portal Cloud Service and has been accepted to be imported into the Product Hub Cloud Service at any given time.
For the purposes of Fusion Accounting Hub Cloud Service, a record is a unique external transaction row uploaded to Accounting Hub Cloud Service during the month, and stored in the hosted service. It will be based on unique records in the subledger accounting lines table.

For the purposes of Fusion Accounting Hub Analytics Cloud Service, a record is a unique external transaction row uploaded to Accounting Hub Cloud Service during the month, and stored in the hosted service. It will be based on unique records in the subledger accounting lines table.

For the purposes of Enterprise Data Management Cloud Service, a record is defined as a unique instance by name of a specific business entity -- called a node -- such as, but not limited to, company, account, cost center, product, customer, location, departments, or other critical business elements that are managed within the hosted service.

For the purposes of Avalara Global Indirect Tax Cloud Service and Thomson Reuters Global Indirect Tax Cloud Service, a record is defined as a sale or purchase, quote or transfer document. Example documents include but are not limited to AP supplier invoices, AR customer invoices, purchase orders, purchase requisitions, prepayment invoices, credit memos, debit memos, change orders, and/or sales orders. Avalara and Thomson Reuters may process a document multiple times across its life cycle events; this is still counted as one record.

Hosted Compensated Individual: is defined as an individual whose compensation or compensation calculations are generated by the programs. The term Compensated Individual includes, but is not limited to, Your employees, contractors, retirees, and any other person. For the purposes of the Fusion Workforce Compensation product, Hosted Compensated Individual is calculated on a 12-month rolling basis.

Hosted Employee: is defined as

(1) all of Your full-time, part-time, temporary employees, and

(2) all of Your agents, contractors, and consultants where such agents, contractors, and consultants have access to, use of, or are tracked by the programs.

The quantity of the licenses required is determined by the number of Hosted Employees and not the actual number of users.

In addition, if You elect to outsource any business function(s) to another company, the following must be counted for the purposes of determining the number of Hosted Employees: all of that other company's full-time employees, part-time employees, temporary employees, agents, contractors, and consultants that (1) are providing the outsourcing services and (2) have access to, use of, or are tracked by the programs.

Hosted Environment: is the combination of systems and supporting resources to which Oracle grants You access as part of the Oracle Cloud Services ordered by You, that is (1) configured for the Oracle Programs operating on it and for specific uses as part of the Oracle Public Cloud Services, and (2) used by Oracle to perform the Oracle Cloud Services. The Hosted Environment consists of the production environment, and any non-production environment, as referenced in the applicable Ordering Document and services policies.

Hosted Full-Time Equivalent (FTE) Student: is defined in the following way: Any full-time student enrolled in Your institution and earning academic credit counts as 100% of an FTE Student. Any part-time student enrolled in Your institution and earning academic credit counts as 25% of an FTE Student. Any student enrolled in Your institution but not earning academic credit (for example, continuing education students) counts as 17.5% of an FTE Student.

The definition of "full-time" and "part-time" is based on Your policies for student classification. If the total number of FTE Students is a fraction, it will be rounded up to the nearest whole number.

Hosted Managed Resource: is defined as a physical asset subject to the applicable service (such as a truck or a train) and individual users of the service, as well as all Your employees, contractors, partners, and any other individual or entity managed by the service.

For the Fusion Workforce Labor Optimization Cloud Service product the quantity is defined as all persons whose work schedules are optimized by the programs, and all users managing the schedules of those scheduled persons.

This document is the property of Oracle Corporation. Any reproduction of this document in part or in whole is strictly prohibited. For educational purposes only. Subject to change without notice.

Definitions (continued)

Hosted Named User: is defined as an individual authorized by You to access the hosted service, regardless of whether the individual is actively accessing the hosted service at any given time. Hosted Named Users may include Business Network Administrators, Endorsing Trading Partners and Participating Trading Partners.

For the purposes of Talent Review & Succession Management Cloud Service, Talent Review & Succession Management for Midsize Cloud Service, Fusion Talent Management for Coexistence Cloud Service, Workforce Compensation Cloud Service, Workforce Compensation for Midsize Cloud Service and Fusion Talent Management and Workforce Compensation Cloud Service, Hosted Named User is calculated on a 12-month rolling basis. The peak number of Hosted Named Users at any given time during each calendar month of the Service Period determines your compliance with this metric.

For the purpose of Oracle Field Service Cloud, authorized individuals are users directly configured in Oracle Field Service Cloud where the User Classification is "regular". The quantity of Hosted Named Users on the ordering document is the maximum number of Hosted Named Users. At the end of each service month, Oracle reviews daily counts to determine the peak number of authorized users for the service month.

Hosted Named User Per Month: is defined as an individual authorized by you to access the hosted service in a calendar month, regardless of whether the individual is actively accessing the hosted service at any given time.

Hosted Record (for Account Enrichment and Contact Enrichment Cloud Service): is defined, for the purposes of the Oracle Account Enrichment Cloud Service, Oracle Contact Enrichment Cloud Service, Oracle Account Enrichment Additional Application Cloud Service, and Oracle Contact Enrichment Additional Application Cloud Service, as a database record in the Cloud Service that has a collection of attributes or fields containing data about Accounts (also referred to as Companies) and Contacts provided by Dun & Bradstreet (D&B).

A database record that is created and first processed (e.g., when the record is either downloaded or matched to enrich/clean an existing Hosted Record) constitutes a new Hosted Record for the purposes of the order including pricing. Further processing of that Hosted Record within 12 months of the first time the record is processed does not constitute a new Hosted Record for pricing purposes.

Hosted Record (for Oracle Address, Email and Phone Verification Cloud Service): is defined for the purposes of the Oracle Address, Email and Phone Verification Cloud Service, as a database record in the Cloud Service that has (1) a collection of attributes or fields containing data such as street, city, country, etc. about a postal address; (2) a collection of attributes or fields containing data such as country code, area code, exchange and number, etc. about a phone number; (3) a collection of attributes or fields containing data about an email address. A Hosted Record in this context is the result of the submission of one address record for the purposes of either searching or verifying or cleaning an address against Loqate's worldwide reference data set; one phone or email for the purposes of verifying a phone number or an email address against Loqate's worldwide phone and email verification service. Each submission of an address constitutes a new Hosted Record for the purposes of the order including pricing. Multiple submissions of a single address, email, or phone will be treated as separate records.

Hosted Tax Return: is defined as the total number of tax returns that a customer purchases to support their statutory tax returns filing requirements with local jurisdiction tax authorities.

Large Language Model (LLM): An LLM is a type of AI model trained on vast amounts of text data to understand and generate human-like language. Examples include GPT models from OpenAI, and Llama models from Meta.

Maintenance Unit: is defined as the units required to enable a specific code type in a specified country across all supported wireless carriers.

Monitored Account: is defined as a user account that enables an identity to perform actions in an application, including creating, reading, updating, or deleting data. An identity may be a human user, such as an employee or contractor, or a machine user, such as a service or integration account.

For the purposes of Oracle Fusion Risk Assurance Cloud Service and Oracle Fusion Cybersecurity Assurance for ERP Cloud Service, the number of Monitored Accounts is the sum of:

(i) Fusion Accounts, which is the total number of Hosted Named Users in Oracle Fusion Enterprise Resource Planning Cloud Service and Oracle Fusion Enterprise Resource Planning for Self Service Cloud Service; and

(ii) Non-Fusion Accounts, which is the total number of user accounts ingested from a monitored non-Fusion application's user directory or identity store.

Each Monitored Account is counted separately for each monitored application, even if the same identity has accounts in Fusion and multiple non-Fusion applications.

Pooled Named User: is defined as an individual authorized by You to access the hosted service, regardless of whether the individual is actively accessing the hosted service at any given time during one calendar month.

The Pooled Named Users are pooled for the Service Period stated on the Order Document. You can consume as many units as You need for each month, but will need to buy more units to fill Your pool if You run out of capacity before the Service Period End Date. This is monitored retroactively. At the end of each calendar month, Oracle will look at the previous month's provisioned unique user count, find the maximum number used during the calendar month and decrement that amount from the total User pool.

Student Aid Applicant (SAA): is defined as the quantity of individuals who have submitted an Institutional Student Information Record (ISIR) to Your institution within the prior 365 days, inclusive of the date of measurement.

Student Aid Recipient (SAR): is defined as the quantity of Your students who have received any form of financial aid (including grants, scholarships, loans, work-study, or stipends) processed through the system within the prior 365 days, inclusive of the date of measurement.

Test Environment is defined as a single test environment provided to You as part of the Cloud Services. A Test Environment is used for testing and validating changes prior to promotion to the production environment as well as for recreating events and duplicating issues occurring in the production environment for the purposes of troubleshooting and facilitating incident resolution.

For the following services, the Additional Environment option will provide either (a) two additional non-production environments for use with the associated Cloud Service or (b) two additional standby environments for use with the associated Cloud Service for use during service disruption only: Financial Consolidation and Close Cloud Service, Account Reconciliation Cloud Service, Tax Reporting Cloud Service, Enterprise Planning and Budgeting Cloud Service, Planning and Budgeting Cloud Service, Enterprise Performance Reporting Cloud Service, Oracle Profitability and Cost Management Cloud Service or Enterprise Data Management Cloud Service. Transparent Data Encryption encrypts Your content stored in the Oracle Fusion Applications when Your content is saved to disk, thereby protecting against access to the data as it is stored in files on the operating system. Database files (which store data from the database on the file system) and database backups are encrypted and cannot be read.

Warehouse Facility: is defined as a warehouse location where Oracle Warehouse Management Enterprise Edition Cloud Service is integrated with one or more types of material handling equipment systems. Examples of material handling equipment include: conveyors, pick/put-to-light systems, carton sorters, tilt tray sorters, automated storage and retrieval systems.

This document is the property of Oracle Corporation. Any reproduction of this document in part or in whole is strictly prohibited. For educational purposes only. Subject to change without notice.
