Oracle Supplemental Resource for Oracle Cloud - Senior Advanced Support Engineer - SaaS	1,500	Day	6 days	B87521

Definitions

Hosted Employee: is defined as (i) all of your full-time, part-time, and temporary employees, and (ii) all of your agents, contractors and consultants who have access to, use, or whose roles are tracked by the hosted service ordered (collectively, "Employees") The quantity of the required access rights is determined by the number of Employees and not the actual number of users. In addition, if you elect to outsource any business function(s) to another company, the following must be counted for purposes of determining the number of Employees: all of the other company's full-time employees, part-time employees, temporary employees, agents, contractors and consultants that (i) are providing the outsourcing services and (ii) have access to, use or whose roles are tracked by the hosted service.

Hosted Named User: is defined as an individual authorized by you to access the hosted service, regardless of whether the individual is actively accessing the hosted service at any given time.

Hosted Trainee: is defined as an employee, contractor, student or other person who is authorized by you to access the hosted service, regardless of whether the individual is actively accessing the hosted service at any given time.

Destination System: is defined as an integration to an external system. Destination System fees are incurred based on the number of external systems and types of integration protocols. The integration to a single external system using a single protocol may transmit data of different types. Integrations to different network locations or utilizing different protocols will incur additional fees per network location or protocol.

Per Partner Setup: is defined as the initial activation of each Oracle Taleo Business Edition (TBE) partner's product for use on a given customer's cloud service 'zone' (instance). If a customer activates more than one partner's product in a zone, then each such activation will incur the Per Partner Setup fee. Similarly if a customer has contracted for multiple production zones, for example to provide independent services to different subsidiaries, and chooses to activate a given partner on multiple zones, then the Per Partner Setup fee will be incurred for each such activation.

Per Posting: is defined as the transmission of job requisition information to a job board or other location, other than any 'free' locations for which transmission may be provided at no cost by the job posting service, as specified in its service description.

Test Environment: is defined as a single test environment provided to Customer as part of the Cloud Services. A test environment is used for testing and validating changes prior to promotion to the production environment as well as for recreating events and duplicating issues occurring in the production environment for the purposes of troubleshooting and facilitating incident resolution.

VPN Connection: is defined as each Oracle virtual private network connection installed between the Oracle data center and Customer.
