Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.
Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

## Product Planning | R&D Engineering

Manage product lifecycles systematically. Innovate, reduce cost, and deliver profitable products while collaborating with all parties in the supply chain.

**Roles:** CTO, VP Research & Development, VP Product Management, VP Engineering, VP Hardware, VP Software, VP Business Development, VP Sales

### Key Challenges

Automotive customers expect incentivized pricing, a wide range of models, and rapid time to market. Due to these high expectations—and the emergence of personalized automobiles—suppliers are feeling the pressure to accelerate innovation and stay ahead of the competition by supporting tomorrow’s digital landscape today. To do so they need a robust, intuitive product lifecycle solution as digitization and new disruptive technologies are shrinking product lifecycles and pushing the industry toward service-based business models. Increases in software-led innovation, combined with the move to cloud-based offerings, means product development cycles are shifting from linear to continuous.

### Best Practices

And as companies produce more complex technology products and services, they can only afford to invest in the very best ideas. To stay ahead of the competition, leading automotive supplier companies need to digitally transform their innovation and product development processes.

- Delivering the right product to market at the right time.
- Improving innovation NPI and financial performance.
- Shifting business models to support delivering products as service-based offerings.
- Managing shrinking product lifecycles and the pressure to get to market before competitors.

### Metrics

- Managing increasing complexity in products, design networks, supply chains, and manufacturing.
- Enabling collaboration in product development, and synchronizing designs between internal and external teams.
- Maintaining quality while controlling costs.
Industry Value Map – Automotive Suppliers

# Product Planning | R&D Engineering

Manage product lifecycles systematically. Innovate, reduce cost, and deliver profitable products while collaborating with all parties in the supply chain.

**Roles:** CTO, VP Research & Development, VP Product Management, VP Engineering, VP Hardware, VP Software, VP Business Development, VP Sales

### Key Challenges

Oracle’s [Connected Digital Innovation](#) solution is a modern cloud platform that enables the creation of a digital thread capable of tracking the automotive supplier product lifecycle from idea to inception—through release, in-field use, and service. Comprised of a suite of Oracle Cloud products that can be chosen to meet specific needs, the solution provides a closed-loop innovation cycle that integrates quality data, user feedback, Internet of Things-enabled product usage analysis, and collaboration across the value chain. This enables automotive suppliers to reduce time to market, while improving quality and customer satisfaction.

### Best Practices

- Fuel the innovation pipeline with ideas from customers, social media, market insights, and Internet of Things data about product usage.
- Improve innovation by using a defined process with objective evaluation criteria to ensure the best ideas are progressed.
- Manage portfolio and development to improve ROI and NPI, with better time to market, compliance, acceptance, and development costs.
- Support real-time design collaboration across LOBs, suppliers, partners, and customers through shared master data management and visualization.

### Solutions

- Centralize CAD-agnostic product design, engineering, repair, and change data.
- Thread detailed specifications, digital assets, and product attributes via a single enterprise product record, to accelerate downstream processes and streamline launches.
- Drive continuous improvement by integrating enterprise-wide quality processes across all organizations.
- Integrate customer feedback, quality data, and regulatory checks in a closed-loop, workflow-automated system.

Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Innovation Management Cloud
Accelerates and streamlines innovative ideas by collecting feedback from the customer, partner, supplier, and internal resource ecosystem. Social collaboration and embedded analytics enable faster decision-making and traceability, allowing key decision-makers to become more data driven, and results-oriented.

Product Development Cloud
Provides a product lifecycle management (PLM) solution designed to help organizations accelerate time to market by managing and coordinating product development data and processes.

Product Planning | R&D Engineering
Manage product lifecycles systematically. Innovate, reduce cost, and deliver profitable products while collaborating with all parties in the supply chain.

Roles: CTO, VP Research & Development, VP Product Management, VP Engineering, VP Hardware, VP Software, VP Business Development, VP Sales

Product Hub Cloud
Controls enterprise product data and processes securely, and helps businesses rapidly commercialize products for globalized manufacturing and multi-channel commerce.

Quality Management Cloud
Drives best practice from issue to resolution, with a unified platform designed to enable quality visibility, collaboration, and execution.

Project Portfolio Management Cloud
Provides integrated project management that helps plan and manage resources, and oversee innovation, design, product release, and quality-management activities.

Internet of Things Asset Monitoring Cloud
Monitors sensors on suppliers’ connected products in real time, and analyzes unique usage patterns to identify issues and product enhancement opportunities.
Industry Value Map – Automotive Suppliers

Manage product lifecycles systematically. Innovate, reduce cost, and deliver profitable products while collaborating with all parties in the supply chain.

Roles: CTO, VP Research & Development, VP Product Management, VP Engineering, VP Hardware, VP Software, VP Business Development, VP Sales

Key Challenges
- How can you release new products ahead of the competition?
- How can you reduce development cycle times?
- How do you evaluate research and development (R&D) performance and processes?
- How do you review and make decisions about funding for new product development or sustained engineering?
- Can you manage the delicate balance between cost, speed, quality, and meeting customer expectations?

Key Questions
- Are you delivering the right products to the market fast enough?
- Do you have the right portfolio mix to meet short-term revenue and long-term growth goals?
- How do you align initiatives to corporate objectives?
- Do you have a process for monitoring and objectively evaluating projects to make go/no-go or kill decisions?
- How many quality systems are you using? Are you comfortable with the results?
- How are quality issues surfaced within your organization? Is it difficult to get product feedback from the field or from manufacturing?
- Do you have an Internet of Things strategy to provide feedback to engineering?
- Are you monitoring assets or social sites for automated feedback about product management or quality?

---

**Key Challenges**

**Challenges:**
Due to expanding manufacturing operations, Samsung Electro-Mechanics needed to introduce a cost-effective, easy-to-use solution capable of accommodating ERP data growth. The organization also sought to improve system performance and increase work efficiency—for example, by generating reports for electronic component production, sales, and distribution.

**Quote:**
"Oracle Advanced Compression provided the simplicity and efficiency that we required to manage our exponential ERP data growth. We can now automate data compression, maximize our storage utilization, and reduce costs."

**Soonku Park**, Senior Manager, Information Strategy Group, Samsung Electro-Mechanics

**Results:**
- Increased operating efficiency by reducing CPU usage rates by up to 30%.
- Compressed ERP data by 30%, and maximized storage utilization and tracking to achieve projected savings of more than US$2.6 million in total cost of ownership over five years.
- Achieved faster response times, including component inventory status and production scheduling.

---

**Leading disk-drive manufacturer** – Moved three Fortune 500 companies to the cloud for a single source of truth for product data.

**Challenges:**
Consolidation is prevalent in the disk-drive industry, and as one of the biggest manufacturers (a US$20 billion company), this organization had already bought up considerable assets. Revenue went from US$5.3 billion to US$8 billion in a year due to the acquisitions; however, the two newly acquired organizations were SAP customers, creating integration challenges. The biggest issue was that production data was segregated across disparate legacy systems.

**Results:**
- Reduced IT costs through common systems across all business units.
- Integrated to EDQP for auto classification of product information.
- Rationalized business attribution and data cleansing.
- Standardized cloud process across its three entities.

---

**Key Challenges**

- Consolidation is prevalent in the disk-drive industry.
- Revenue went from US$5.3 billion to US$8 billion in a year due to acquisitions.
- Production data was segregated across disparate legacy systems.

**Best Practices**

- Move to the cloud for a single source of truth for product data.

**Solutions**

- Oracle solutions enable access to information and create flexibility.

**Key Questions**

- How can we manage product lifecycles systematically?
- How can we reduce costs and deliver profitable products?
- How can we collaborate with all parties in the supply chain?

**Metrics**

- IT costs
- Revenue
- Production data

**Customer Success**

- Results achieved through Oracle solutions.

**Key Resources**

- Oracle software and services.

Key Challenges Metrics Customer Success Key Questions Solutions Key Resources Best Practices

A leading infrastructure provider for data centers, communications networks, and industrial facilities – Implemented Oracle Innovation Management Cloud for requirements management and traceability.

Challenges:
Tie marketing/customer requirements (from field engineers) through to product requirements and track to any corresponding engineering changes. Manage requirements across the complete lifecycle of the product, and maintain a single platform to document, revise, release, and distribute requirements across all functional teams.

Quote:
“We can now tie customer requirements to engineering requirements to the tests we have completed for our records. Something that we could not do previously. We have also put in place a standard operating procedure for the entire global community for this business area. Very challenging but we did it.”

Global Project Lead

Results:
- Implemented Oracle Innovation Management Cloud requiring multi-language and global data protection regulation, including operations in North America, China, India, and Europe, consisting of a 600-person user base.
- Improved ability to tie customer requirements to engineering requirements to the tests completed.

Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Key Challenges

- Managing OEM demand and delivery of products and services across business systems and channels seamlessly.
- Streamlining order fulfillment across multiple systems by supporting inbound EDI data.
- Nurturing customers, tier-N suppliers, and prospects through the lead-to-cash process across all channels.
- Gaining the insight needed to predict new sales, services, and engagements.
- Leveraging monetization models to enable new digital offerings.

Best Practices

- Managing and analyzing individual marketing campaigns and prioritizing investments by simulating expected results.
- Automating closed-loop customer segmentation models, campaigns, and lead management for targeted pricing/incentive programs.
- Creating new opportunities by harnessing 360-degree insights from customer/market data.
- Managing partners using a comprehensive and integrated partner relationship management system, as part of a complete campaign-to-cash process.
- Configuring, pricing, and selling product and service bundles based on customer expectations, preferences, and behaviors.

Oracle’s Deliver-Anything-as-a-Service solution enables automotive suppliers to deliver omnichannel customer experiences while providing flexibility for new revenue models. Automotive suppliers can help nurture customers and prospects through the lead-to-cash process across all their channels, while using insights to predict new sales, services, and engagements. They can also streamline fulfillment across multiple systems, through order orchestration and global order promising. Monetization models enable new digital offerings, from basic recurring revenue to sophisticated usage-based services, to be deployed quickly to generate more predictable revenue streams.

Roles: CMO, VP Marketing, VP Brand Management, Development, VP Partners, VP Sales, VP Finance, VP Supply Chain Management
Sales Operations | Marketing

Execute targeted marketing, integrate channel partners, forecast globally, employ high-margin deal/pricing strategies, capture sales orders, manage promotions and sales incentives, and leverage actionable intelligence for better decision-making.

**Key Challenges**

Mack Trucks sought to modernize and digitize its marketing mix. Social channels were underutilized and difficult to scale and track back to marketing ROI. Buyer behaviors were changing—with potential customers self-educating and entering the funnel at a more advanced stage.

**Quote:**

"Oracle enables us to be more engaging, insightful, and responsive—and consistently deliver a rewarding customer experience across our social media channels—all from a single, unified platform."

**John Walsh**, Mack Vice President of Marketing

**Results:**

- Increased social presence, scalability, and engagement.
- Established a platform for integrated, multi-channel campaigns with the ability to track social contribution.
- Gained the ability to deliver personalized content and progress leads.
Sales Operations | Marketing

Execute targeted marketing, integrate channel partners, forecast globally, employ high-margin deal/pricing strategies, capture sales orders, manage promotions and sales incentives, and leverage actionable intelligence for better decision-making.

**Roles:** CMO, VP Marketing, VP Brand Management, Development, VP Partners, VP Sales, VP Finance, VP Supply Chain Management

---

**Trimble Navigation** (case study) – Deployed an Oracle cloud-based configuration solution to help customers select the right products faster.

**Challenges:**
As Trimble expanded into new markets and more remote regions, it needed an easy-to-use tool to help partners get their sales operations up and running quickly.

**Quote:**
“Oracle streamlines the entire opportunity-to-quote-to-order process enabling us to deliver a superior customer experience through all channels.”

**Angela Driver,** Director, Business Systems and Service, Trimble Navigation

**Results:**
- Freed up resources—80% of its SITECH channel partner base no longer needs assistance from Trimble’s account team for quotes.
- Realized 10% to 15% in incremental revenue.
- Enabled Trimble to go directly to consumers working with their partners, lowering the cost of the sale and enabling more low- or no-touch sales.
Sales Operations | Marketing

Execute targeted marketing, integrate channel partners, forecast globally, employ high-margin deal/pricing strategies, capture sales orders, manage promotions and sales incentives, and leverage actionable intelligence for better decision-making.

**Roles:** CMO, VP Marketing, VP Brand Management, Development, VP Partners, VP Sales, VP Finance, VP Supply Chain Management

**Key Challenges**

- **Avaya** (video) – Deployed a scalable partner management platform using Oracle Sales Cloud, PaaS, Java Cloud, and Integration Cloud Service.

  **Challenges:**
  The company was struggling with ongoing maintenance of a custom-built legacy platform. It needed a more cost-effective approach, and was looking for a cloud-based solution that could scale.

  **Quote:**
  "From the time we start marketing through selling and providing services, we use Oracle Marketing Cloud to generate leads, Sales Cloud for partner management and incentive comp, and Social Cloud to manage the relationships end to end."

  Fari Ebrahimi, Sr. VP & Global CIO, Avaya Inc.

**Results:**
- Reduced customizations by 80% using open standards instead of proprietary toolsets.
- Created a next-generation platform to serve half a million customers on five continents.
Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Integrated Business Planning

Drive optimal executive decision-making by aligning strategic objectives and operational plans of key resources—people, equipment, inventory, materials, time, and money—to effectively and profitability satisfying the entire ecosystem.

Roles: CEO, COO, CFO, VP Logistics, VP Supply Chain, VP Manufacturing, VP Sales, VP Operations, VP Marketing, VP Engineering, VP Finance

Key Challenges

Automotive suppliers are facing increased competition, commoditization, and globalization. They are also dealing with shorter product lifecycles and the pressure to introduce new service-based business models. To survive, they need to ensure excellence in both operational and strategic management, laying the foundation for continuous innovation.

Best Practices

- Eliminating pervasive information silos that limit visibility, hamper collaboration, increase costs, and inhibit innovation.
- Using clear, objective analysis to remove the emotional bias from the decision-making process.
- Responding quickly and accurately to demand fluctuations.
- Integrating strategy, planning, and execution into a seamless process.

Solutions

- Creating and aligning enterprise-wide strategic plans for profitability, resource allocation, and performance optimization.
- Integrating shifting NPI plans and priorities with ongoing operational planning.

- Creating and aligning enterprise-wide strategic plans for profitability, resource allocation, and performance optimization.
- Integrating shifting NPI plans and priorities with ongoing operational planning.

Key Questions

- Key Challenges
  - Automotive suppliers are facing increased competition, commoditization, and globalization. They are also dealing with shorter product lifecycles and the pressure to introduce new service-based business models. To survive, they need to ensure excellence in both operational and strategic management, laying the foundation for continuous innovation.

Best Practices

- Eliminating pervasive information silos that limit visibility, hamper collaboration, increase costs, and inhibit innovation.
- Using clear, objective analysis to remove the emotional bias from the decision-making process.
- Responding quickly and accurately to demand fluctuations.
- Integrating strategy, planning, and execution into a seamless process.

Metrics

- Customer Success

Integrated Business Planning

Drive optimal executive decision-making by aligning strategic objectives and operational plans of key resources—people, equipment, inventory, materials, time, and money—to effectively and profitability satisfying the entire ecosystem.

Roles: CEO, COO, CFO, VP Logistics, VP Supply Chain, VP Manufacturing, VP Sales, VP Operations, VP Marketing, VP Engineering, VP Finance

Key Challenges

Oracle’s Integrated Business Planning and Execution solution aligns finance, sales, and operational metrics to meet the automotive suppliers’ corporate goals. This ensures executives have the insights to make critical decisions at the right time. By predicting and responding to identified gaps in business performance, organizations can achieve substantial benefits to their bottom line. Automotive suppliers that operate a well-run, monthly integrated business planning process are more efficient, more effective, and more profitable than those that don’t.

Best Practices

- Obtaining the insights to make critical decisions at the right time.
- Predicting and responding to identified gaps in business performance.
- Driving intelligence across the enterprise by linking strategic, financial, and operational management processes.
- Creating a single source of truth for generating strategic and operational plans that enable accurate decision-making aligned to corporate goals.
- Reviewing key performance metrics against industry benchmarks and desired targets aligned to strategic corporate goals.
- Using scenario planning across an integrated set of financial, sales, and operational plans to optimize business performance.
- Calculating the risk associated with all strategies and plans, and understanding the variables that have the most impact.
- Streamlining annual planning and budgeting cycles using a monthly integrated business planning process.
Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Key Challenges

Supply Chain Planning Cloud
- Provides a complete sales and operations planning (S&OP) solution for aligning organizations around an integrated operating plan to meet strategic business goals.
- Enables accurate sensing, predicting, and shaping of customer demand through a comprehensive demand-planning application.
- Enhances operational efficiency and customer satisfaction by planning item, material, and component supply, monitoring supply performance, and responding to demand, availability, and resource issues as they occur.

Enterprise Planning and Budgeting
Cloud Service
- Enables organizations of all sizes to adopt an enterprise-wide and department-level planning and budgeting process.
- Allows users to create multiple what-if scenarios with sophisticated modeling and predictive analytical capabilities.
- Helps meet business objectives by creating goal-oriented reports, and dashboards.

Proficiency and Cost Management
Cloud Service
- Empowers business users with the insight and flexibility to increase profitability.
- Provides actionable insight into allocation-based business processes, by seamlessly combining data from financial and operational systems.
- Provides the transparency to support analysis within today’s automotive supply chain enterprises.

Integrated Business Planning

Drive optimal executive decision-making by aligning strategic objectives and operational plans of key resources—people, equipment, inventory, materials, time, and money—to effectively and profitability satisfying the entire ecosystem.

Roles: CEO, COO, CFO, VP Logistics, VP Supply Chain, VP Manufacturing, VP Sales, VP Operations, VP Marketing, VP Engineering, VP Finance

Integrated Business Planning

Drive optimal executive decision-making by aligning strategic objectives and operational plans of key resources—people, equipment, inventory, materials, time, and money—to effectively and profitability satisfying the entire ecosystem.

Roles: CEO, COO, CFO, VP Logistics, VP Supply Chain, VP Manufacturing, VP Sales, VP Operations, VP Marketing, VP Engineering, VP Finance

Cummins Inc. (case study) – Decreased cost and increased revenue by deploying several Oracle Cloud solutions.

Challenges:
Cummins needed a strategic, unified process that could help them lower their IT run costs and overall product costs.

Quote:
“We had five different systems, 352 interfaces, thousands of organizations, and little appetite for change. To win people's hearts and minds, we had to help them understand that the world had changed. They would be able to leverage new innovations every six months, but sometimes that meant changing their process in order to adopt the technology. In year one, we had 98 percent user adoption.”

Fabio Fukuda, Director Global HRIS & Analytics, Cummins Inc.

Results:
- Reduced high-risk suppliers, and created a multisourcing supplier platform that reduced supplier failures.
- Standardized the data entry process for trading partners—especially partner location—to ensure consistency and control after shipments leave the warehouse.
- Improved customers’ receiving processes and reduced inconsistencies in shipment information throughout the supply chain.
Integrated Business Planning

Drive optimal executive decision-making by aligning strategic objectives and operational plans of key resources—people, equipment, inventory, materials, time, and money—to effectively and profitability satisfying the entire ecosystem.

**Roles:** CEO, COO, CFO, VP Logistics, VP Supply Chain, VP Manufacturing, VP Sales, VP Operations, VP Marketing, VP Engineering, VP Finance

---

**NCR—Texas Digital** (video) – Increased speed and agility at lower cost with Oracle ERP Cloud and SCM Cloud.

**Challenges:** After acquiring Texas Digital, NCR recognized that the business was being run on extremely outdated systems and processes.

**Quote:** "We deployed Oracle SCM and ERP. Moving to the cloud will not only give us the agility, it will also help us decrease our cost model."

**Chris Neff,** Senior Director, IT, NCR

**Results:**
- Faster time to value with lower cost for new feature implementation.
- Growth driven with easy scalability.
- Increased innovation from standard software, utilizing industry best practices.
Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Key Challenges
- Fragmented and disconnected systems due to multiple acquisitions.
- Lack of timely data to manage business effectively.
- The need for scalable systems and processes for future mergers and acquisitions.

Quote:
“ARRIS is driving the adoption of cloud technology in our own industry to accelerate innovation in internet and video services, so we recognize Oracle Cloud’s power to improve efficiency, scale, and speed for our customers on a global level.”

Phil Baldock, Chief Information Officer, ARRIS

Roles: CEO, COO, CFO, VP Logistics, VP Supply Chain, VP Manufacturing, VP Sales, VP Operations, VP Marketing, VP Engineering, VP Finance

Results:
- Integrated multiple, disparate systems from procurement and payment to product design.
- Improved customer satisfaction by reducing lead times and accurately promising delivery dates.
- Reduced costs and increased efficiency by standardizing and reducing the number of processes by 30%.
- Improved productivity and visibility by replacing 19 project management applications with one.

</thead>
<tbody>
<tr>
<td>Automotive suppliers support highly complex supply chain networks. With multiple siloed plans, it can be hard to achieve end-to-end visibility across global supply chains. Static, uncoordinated segments leave them spending most of their planning time connecting and assimilating data. Without the right technology, it can be challenging to analyze and predict customer behavior, accurately forecast demand, and optimize inventory while responding to market changes. On top of that, today's automotive suppliers need to support direct sales channel (B2B and B2C) encompassing various outsource manufacturers and tier-N suppliers, ensuring their continued success to the automotive industry.</td>
<td>Dealing with demand and supply variability/forecasting issues.</td>
<td>Making faster/better decisions in supply chain planning and manufacturing production.</td>
<td>Resolving issues quickly when outdated plans hinder visibility.</td>
<td>Streamlining complex operational processes to increase productivity and mitigate risks.</td>
<td>Aligning business priorities to operational excellence.</td>
<td>Delivering excellent service while minimizing cost.</td>
</tr>
</tbody>

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

**Supply Chain Management**

Drive profitable revenue growth by integrating the planning process, synchronizing demand and supply, and dynamically responding to resources across the global network. Improve supplier performance and collaboration to optimize inventory.

**Roles:** COO, CFO, VP/Director Supply Chain, VP Logistics, VP/Director Manufacturing, VP Services, VP Sales, VP Engineering, VP Finance

**Key Challenges**

Oracle’s Supply Chain Management solution delivers the visibility, insights, and capabilities required to create an intelligent supply chain. It enables automotive suppliers to use emerging technologies such as Internet of Things, artificial intelligence, and blockchain, to improve forecast accuracy, optimize decision-making, streamline compliance confirmation, improve collaboration, automate supply chain execution, improve transparency, reduce financial transaction third-party costs, and proactively manage exceptions. It integrates end-to-end processes on a unified cloud platform providing rapid simulation and enables faster, more profitable responses to supply and demand changes. Companies can optimize their supply chain operations through easier collaboration with contract manufacturers.

**Best Practices**

- Gaining product innovation, strategic material sourcing, outsourced manufacturing, integrated logistics, omnichannel fulfillment, and integrated demand and supply planning capabilities.
- Providing a consensus demand-planning process across sales and marketing, incorporating NPI, promotions, regions, and seasonality trends.
- Aligning forecasts to actual demand, using artificial intelligence and attribute-based forecasting, ad hoc line-item forecasting, and advanced analytics.
- Using sense, shape, and response capabilities to support S&OP, with accurate forecasts that all departments can agree upon.
- Transitioning to a proactive, real-time planning process and one-number demand management.
- Using real-time scenario planning to enable quick responses to supply and demand changes, plant utilization, and bottlenecked resources.
- Facilitating workflow-driven collaborative planning to improve responsiveness to changes in demand and supply.
- Enabling top-down, bottom-up planning for validating business plans and identifying potential gaps.
- Unifying performance management with business intelligence on a common set of dashboards—viewable by different dimensions.

**Supply Chain Management**

Drive profitable revenue growth by integrating the planning process, synchronizing demand and supply, and dynamically responding to resources across the global network. Improve supplier performance and collaboration to optimize inventory.

**Roles:** COO, CFO, VP/Director Supply Chain, VP Logistics, VP/Director Manufacturing, VP Services, VP Sales, VP Engineering, VP Finance

---

**Key Challenges**

- Do you have the flexibility and agility to deliver to the agreed customer service levels and meet changing demands?
- Can you integrate supply, demand planning, and supply chain collaboration?
- Can your supply chain systems profitably respond to rapid supply and demand changes? Do your planners provide timely answers?
- Is on-time delivery performance an issue? Is inventory an issue?
- How do you forecast demand and measure its accuracy?

---

**Best Practices**

- Do you have adequate forward-looking visibility into your supply chain to effectively manage growth and margin objectives?
- Do you have the ability to segment and isolate problem areas that impact performance?
- How do you forecast demand and measure its accuracy? Is on-time delivery performance an issue? Is inventory an issue?
- Do you outsource manufacturing? If so, do you supply components to your contract manufacturers and track their consumption?
- Can you effectively identify and resolve problems across your supply network?

---

**Key Questions**

- Are you happy with your supplier performance (commit, cycle time, etc.)?
- Do you need better collaboration with trading partners on supply plans or contract manufacturing order status?
- Do your partners have differing B2B communication requirements (portal, B2B messaging, trading community membership)?
- What is the average time to create, negotiate, and approve a supplier contract?

Supply Chain Management

Drive profitable revenue growth by integrating the planning process, synchronizing demand and supply, and dynamically responding to resources across the global network. Improve supplier performance and collaboration to optimize inventory.

**Roles:** COO, CFO, VP/Director Supply Chain, VP Logistics, VP/Director Manufacturing, VP Services, VP Sales, VP Engineering, VP Finance

**Challenges:**
GE Digital wanted to standardize systems to support rapid geographic growth and increasing complexity.

**Quote:**
“The interactive nature of the ERP Cloud system, especially for regular users, is better than ever. The ability to see your work list and actions you need to take—with actionable notifications—has been huge. And, we have dashboards that take us from a quote to a revenue dollar in the ledger. It’s all in one stream, so we can tie everything together.”

**John Mageropoulos,** Vice President of Cloud ERP Solutions, GE Digital

**Results:**
- Gained a modern Cloud ERP and SCM solution that drives productivity and flexibility through agile business processes.
- Improved decision-making through real-time business analytics and reporting.
- Reduced time to close books to one day.

<tr>
<td>Modern data technology is affecting the manufacturing and assembly landscape more than ever before. In response, automotive supply chain companies must streamline, synchronize, and pivot at lightning speed. Identifying problem areas and analyzing the entire assembly-line process from a single location requires constant collaboration and robust solutions. Without the key infrastructure and tools in place to keep the line moving, automotive suppliers will lack the agility to predict issues and respond to them in time. In turn, this will negatively affect the entire planning, assembly, quality, and timeliness of product shipping.</td>
<td>- High cost and yield impact of maintenance, internal repair, and operational risks.</td>
<td>- Misalignment between demands on local and global operational excellence.</td>
<td>- Lack of flexibility and efficiency in production, while needing to cut costs and drive innovation.</td>
<td>- Ineffective strategies to manage manufacturing performance.</td>
<td>- Inaccurate visibility into production costs and product profitability.</td>
<td>- Inability to develop comprehensive manufacturing strategies based on macroeconomic conditions and supply chain performance.</td>

Manufacturing and Assembly

Maximize efficiencies, enhance product quality, and improve responsiveness to demand fluctuations through lean, flexible manufacturing processes, while coordinating all in-house and outsourced efforts.

Roles: COO, VP/Director Manufacturing, VP/Director Operations, VP/Director Supply Chain

Internet of Things Production Monitoring Cloud ➔
Integrates real-time machine and factory performance data into the discrete manufacturing decision-making process.

Manufacturing Cloud ➔
Streamlines manufacturing processes through visualization, back-flushed transactions, and social collaboration, while controlling costs.

Supply Chain Planning Cloud ➔
Devises revenue growth and cost-reduction strategies proactively, and consistently executes them with enterprise-wide alignment.

Maintenance Cloud ➔
Plans and executes work with an integrated solution that connects maintenance, supply chain, and financial applications, providing a cost-effective and streamlined way to modernize maintenance processes.

Quality Management Cloud ➔
Provides an enterprise solution to define, identify, analyze, and correct quality events and improve the overall effectiveness, safety, and profitability of products and services.

Adaptive Intelligent Applications for Manufacturing Cloud ➔
Uses artificial intelligence to find key patterns and correlations for predicting issues and tracing product genealogy for root cause, impact, and containment analysis.

Blockchain Platform ➔
Provides a comprehensive distributed ledger cloud platform to reliably share data and conduct trusted transactions with suppliers, banks, and other trading partners.

Inventory Management Cloud ➔
Provides comprehensive visibility and management of material flows, warehouse work, and product costs across the supply chain.
Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Manufacturing and Assembly

Maximize efficiencies, enhance product quality, and improve responsiveness to demand fluctuations through lean, flexible manufacturing processes, while coordinating all in-house and outsourced efforts.

Roles: COO, VP/Director Manufacturing, VP/Director Operations, VP/Director Supply Chain

Key Challenges

- What is your strategy to improve manufacturing assembly efficiencies or product quality?
- What is your strategy to integrate Internet of Things in your facilities?
- What is your roadmap for predictive maintenance and predictive efficiency analysis?
- Do you have the ability to segment and isolate problem areas that affect performance and/or quality?
- How are you looking to improve transparency and visibility across your supply chain?

Best Practices

Maximize efficiencies, enhance product quality, and improve responsiveness to demand fluctuations through lean, flexible manufacturing processes, while coordinating all in-house and outsourced efforts.

Roles: COO, VP/Director Manufacturing, VP/Director Operations, VP/Director Supply Chain

Key Questions

- How can you innovate more in manufacturing and supply chain?
- How are you looking to improve transparency in your factories?
- How long does it take you to get value from an Internet of Things proof of concept?
- What risks have you identified with rolling out innovations?
- How do you collaborate with startups and operational technology partners on manufacturing innovation?
Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Manufacturing and Assembly

Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Key Challenges

Manufacturing and Assembly

Maximize efficiencies, enhance product quality, and improve responsiveness to demand fluctuations through lean, flexible manufacturing processes, while coordinating all in-house and outsourced efforts.

Roles: COO, VP/Director Manufacturing, VP/Director Operations, VP/Director Supply Chain

Challenges:
Noble Plastics wanted to automate and improve efficiencies as it transformed from a shoot-and-ship job shop to a product design firm. The company improved visibility into and control over the injection molding process, eliminating manual intervention costs, and providing a key opportunity for automation and innovation.

Quote:
"If we can reduce our manufacturing cycle time, it's a huge deal for our customers—and for us."

Scott Rogers, Technical Director, Noble Plastics

Results:

- Improved customer satisfaction.
- Aided digital transformation from a job shop to an innovative design and manufacturing company though automation.
- Developed a new business model, offering robot monitoring as-a-service.
- Leveraged Oracle Internet of Things to reduce cycle time, improve manufacturing process, and enhance product quality.

Leading supplier of sensing, electrical protection, control and power-management solutions

Noble Plastics (video) – Improved manufacturing process dramatically by using Oracle Internet of Things Cloud.
Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Asset Management

Optimize assets while minimizing capital expenditure by efficiently and proactively monitoring asset health and performance.

**Roles:** COO, VP/Director Manufacturing, VP/Director Outsourced Manufacturing, VP/Director Operations, VP/Director Supply Chain

**Key Challenges**
Operating and maintaining large, expensive, or remote assets presents many challenges—from optimizing complex, global supply chains to mitigating the impact of unpredictable events. Poor management of these operational processes can significantly increase costs, and have a negative impact on profitability. Without the right technology, it can be challenging to predict physical asset maintenance and needs, which will affect all your supply chain activity from manufacturing, inventory movement, warehouse, and shipping of your goods.

**Solutions**
- Dealing with demand and supply variability/forecasting issues.
- Making faster/better decisions in supply chain planning and manufacturing production.
- Streamlining complex operational processes to increase productivity and mitigate risks with your assets.
- Lacking certified resources to run the physical asset equipment.
- Extending asset life and subsequently improve return on assets.

**Best Practices**
Dealing with demand and supply variability/forecasting issues.

**Key Questions**
- Dealing with demand and supply variability/forecasting issues.
- Making faster/better decisions in supply chain planning and manufacturing production.
- Streamlining complex operational processes to increase productivity and mitigate risks with your assets.
- Lacking certified resources to run the physical asset equipment.
- Extending asset life and subsequently improve return on assets.

**Metrics**
- Dealing with demand and supply variability/forecasting issues.
- Making faster/better decisions in supply chain planning and manufacturing production.
- Streamlining complex operational processes to increase productivity and mitigate risks with your assets.
- Lacking certified resources to run the physical asset equipment.
- Extending asset life and subsequently improve return on assets.

**Customer Success**
- Dealing with demand and supply variability/forecasting issues.
- Making faster/better decisions in supply chain planning and manufacturing production.
- Streamlining complex operational processes to increase productivity and mitigate risks with your assets.
- Lacking certified resources to run the physical asset equipment.
- Extending asset life and subsequently improve return on assets.

**Key Resources**

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

### Key Challenges

Oracle’s **Smart Manufacturing** solution better equips automotive suppliers to effectively predict and resolve issues, and identify operational requirements of tier suppliers. By connecting devices to the manufacturing process, Oracle provides a modern platform to collaboratively manage and improve manufacturing.

- Improving visibility into costs, efficiency, and quality across factories.
- Monitoring production performance and predicting maintenance requirements.
- Monitoring assets and predict failure.

---

### Best Practices

**Best Practices**

- Reducing maintenance downtime and costs by moving from time-consuming declarative data to real-time prediction analysis framework.
- Capturing manufacturing equipment sensor data for pattern detection and data mining.
- Using artificial intelligence to discover patterns that predict yield and product defects early in the manufacturing cycle.
- Providing robust engineer-to-order, configure-to-order, assemble-to-order, locate-to-order, and make-to-stock process flows, to optimize responsiveness.

---

### Solutions

**Solutions**

- Enabling plant managers to monitor production operations in real time and analyze shop floor analytics for continuous improvement.
- Evaluating risk scenarios and creating mitigation plans.
- Synchronizing manufacturing with up-to-date product information.
- Automating manufacturing execution systems that can be remotely monitored and adjusted to changes in supply, demand, and market dynamics.
- Planning and scheduling to realistic equipment capacity and adjust operations in real time.

---

---

**Key Challenges**

A large, diversified industrial products manufacturer – Improved management of their plant equipment with Oracle Enterprise Asset Management.

**Challenges:**
This customer was unable to provide the maintenance team and senior management with consistent performance metrics across production lines and plants, and sought to optimize their plant machinery investments.

**Quote:**
"With Oracle Enterprise Asset Management, we have standardized our processes and increased confidence in the data our employees use to make daily manufacturing and maintenance decisions."

**Maintenance Manager**

**Results:**
- Synchronized manufacturing operations—even when underwent a scheduled shutdown.
- Integrated production orders with maintenance orders to fully maximize plant output.
- Improved visibility into preventative maintenance costs, enabling them to make more effective purchasing and operations decisions.
- Realized a better profit-margin due to manufacturing and maintenance process improvements, enhanced reporting, and better decision-making.
Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Asset Management

**Roles:** COO, VP/Director Manufacturing, VP/Director Outsourced Manufacturing, VP/Director Operations, VP/Director Supply Chain

**GE Digital** (press release) – Announced a strategic partnership to build a first-of-its-kind platform for companies to digitally connect industrial assets across the world.

**Challenges:**
Optimize and integrate into one view for customers, allowing for end-to-end insight from customer assets in the field and on the factory floor to the front and back office to the boardroom.

**Quote:**
“We are building an ecosystem with world-class partners who share our belief that customers benefit at the intersection of information technology and operations technology. Oracle has become a market leader in cloud-based enterprise software and we are co-developing solutions on Predix that will leverage this intersection to provide our customers with new insights that were not possible before.”

**Bill Ruh,** CEO, GE Digital

**Results:**
- Automate and optimize business processes.
- Enable better asset visibility, more-efficient supply chains, intelligent manufacturing, including predictive maintenance and service.
- Improve logistics and transportation efficiency.

### Key Challenges

Automotive suppliers have some of the most globally dispersed design, operations, and sales channels in any industry. They must deal with fluctuating demand, constant inventory adjustments, and the influx of inbound and outbound freight. To do so effectively, suppliers must have visibility throughout the supply chain. It’s a struggle to accurately plan for multimode, multileg, multiple shipments through multiple partners and dispersed distribution centers. All of these things affect the final product cost, and impact suppliers’ ability to compete in the automotive supply chain.

### Best Practices

- Optimizing logistics and transportation routing to ensure on-time delivery.
- Measuring performance, analyzing, and gaining full visibility of logistics and transportation operations—especially with outsourced providers.
- Planning and executing logistics, transportation, and warehouse management across a global network.
- Managing multiple transportation systems—including international, domestic, and fleet.
- Achieving complete visibility over goods in transit.

### Key Questions

- Managing dynamic KPIs for freight spend and carrier performance.
- Maintaining integrated, holistic visibility across domestic and international items, orders, and shipments.
- Handling high turnover in non-management positions, which makes recruiting and training critical.
- Managing customs compliance manually.
Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Warehouse Management | Logistics

Manage all inventory, warehouse, and transportation needs effectively, accurately, and on time while minimizing associated costs.

Roles: VP/Director Distribution, VP/Director Logistics, VP/Director Transportation Management, VP/Director Warehouse Management

Key Challenges

Oracle's Digital Logistics solution allows automotive suppliers to monitor and manage cargo, vehicles and schedule services, obtain real-time updates on location and status of cargo for shippers and fleets for logistics service providers, as well as the status, location, and estimated time of arrival of shipments.

- Improving rating and route efficiencies of transported goods.
- Reducing costs of freight.
- Obtaining cargo insight throughout the shipment process for shippers.

Oracle's Smart Connected Warehouse solution provides automotive suppliers the ability to use Internet of Things sensors throughout the warehouse to monitor inventories, equipment health, and worker safety using algorithms to identify patterns and out-of-range variations. It helps automotive suppliers optimize manual and automated warehouse flows, predict pick-and-pack flow efficiency, predict and resolve equipment maintenance, correlate product quality issues to storage and real estate environmental factors, correlate pick-and-pack quality errors to worker and flow factors, anticipate and monitor worker safety issues, reduce downtime, and improve overall safety, quality, and efficiency.

- Optimizing and efficiently managing warehouse operations.
- Improving inventory tracking, traceability, and overall visibility.

Best Practices

Oracle's Digital Logistics solution allows automotive suppliers to monitor and manage cargo, vehicles and schedule services, obtain real-time updates on location and status of cargo for shippers and fleets for logistics service providers, as well as the status, location, and estimated time of arrival of shipments.

- Optimizing and efficiently managing warehouse operations.
- Improving inventory tracking, traceability, and overall visibility.

Solutions

Key Questions

Metrics

Customer Success

Key Resources

- Improving product quality using environmental sensors.
- Reducing stops by connecting your material handling data to run remote operations and proactive maintenance.
- Monitoring all shipments to better understand allocated inventory during planning and mitigate any service-level or delivery risks.
- Integrating logistics and transportation planning, execution, and freight payment onto a single application across all modes and providers.
- Providing shippers with low line-haul rates by combining small shipments with different origins and destinations.

Warehouse Management | Logistics

Manage all inventory, warehouse, and transportation needs effectively, accurately, and on time while minimizing associated costs.

Roles: VP/Director Distribution, VP/Director Logistics, VP/Director Transportation Management, VP/Director Warehouse Management

- Obtaining cargo insight throughout the shipment process for shippers.

Oracle’s Smart Connected Warehouse solution provides automotive suppliers the ability to use Internet of Things sensors throughout the warehouse to monitor inventories, equipment health, and worker safety using algorithms to identify patterns and out-of-range variations. It helps automotive suppliers optimize manual and automated warehouse flows, predict pick-and-pack flow efficiency, predict and resolve equipment maintenance, correlate product quality issues to storage and real estate environmental factors, correlate pick-and-pack quality errors to worker and flow factors, anticipate and monitor worker safety issues, reduce downtime, and improve overall safety, quality, and efficiency.

- Optimizing and efficiently managing warehouse operations.
- Improving inventory tracking, traceability, and overall visibility.

Solutions

Key Questions

Metrics

Customer Success

Key Resources

- Improving product quality using environmental sensors.
- Reducing stops by connecting your material handling data to run remote operations and proactive maintenance.
- Monitoring all shipments to better understand allocated inventory during planning and mitigate any service-level or delivery risks.
- Integrating logistics and transportation planning, execution, and freight payment onto a single application across all modes and providers.
- Providing shippers with low line-haul rates by combining small shipments with different origins and destinations.

Warehouse Management | Logistics

Manage all inventory, warehouse, and transportation needs effectively, accurately, and on time while minimizing associated costs.

Roles: VP/Director Distribution, VP/Director Logistics, VP/Director Transportation Management, VP/Director Warehouse Management

Key Challenges

Oracle's Digital Logistics solution allows automotive suppliers to monitor and manage cargo, vehicles and schedule services, obtain real-time updates on location and status of cargo for shippers and fleets for logistics service providers, as well as the status, location, and estimated time of arrival of shipments.

- Improving rating and route efficiencies of transported goods.
- Reducing costs of freight.
- Obtaining cargo insight throughout the shipment process for shippers.

Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

---

Warehouse Management | Logistics

**Managed all inventory, warehouse, and transportation needs effectively, accurately, and on time while minimizing associated costs.**

**Roles:** VP/Director Distribution, VP/Director Logistics, VP/Director Transportation Management, VP/Director Warehouse Management

---

**Key Challenges**

- **Warehouse Management Cloud**
  - Transforms warehouse and inventory management for the new fulfillment economy with best-of-breed functionality, while giving companies a 360-degree view of their inventory.

- **Transportation Management Cloud**
  - Enables companies to minimize cost, optimize service levels, support sustainability initiatives, and create flexible business process automation within their transportation and logistics networks.

- **Global Trade Compliance Cloud**
  - Enables central management of global trade operations, ensuring the automotive supplier can optimize, automate, and monitor cross-border transactions.

---

**Solutions**

- **Analytics Cloud**
  - Streamlines daily operations and strategically optimizes the responsiveness of supply networks through industry-proven SCM best practices, prebuilt dashboards, reports, and metrics.

- **Internet of Things Connected Worker Cloud**
  - Uses the latest wearable technologies to track worker efficiency and safety—providing real-time visibility into worker status, location, and work environments.

- **Internet of Things Asset Monitoring Cloud**
  - Monitors sensors on suppliers’ connected products in real time, and analyzes unique usage patterns to identify issues and product enhancement opportunities.

- **Procurement Cloud**
  - Streamlines source-to-pay processes through automation and social collaboration, while controlling costs and achieving higher margins.

- **Inventory Management Cloud**
  - Provides comprehensive visibility and management of material flows, warehouse work, and product costs across the supply chain.

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Warehouse Management | Logistics

Manage all inventory, warehouse, and transportation needs effectively, accurately, and on time while minimizing associated costs.

Roles: VP/Director Distribution, VP/Director Logistics, VP/Director Transportation Management, VP/Director Warehouse Management

Key Challenges:
Minimize the costs required to implement a transportation management system. The system must be capable of cost-effectively tracking parts shipments, monitoring KPIs across industrial suppliers, and improving supply chain processes and communication with suppliers.

Quote:
“We deployed Oracle Transportation Management Cloud Service in just weeks, a timeframe vital to our business continuity. In addition, we have optimized our supply chain processes and expenditure, improving the service we provide to our drive system and alternator customers.”

Olivier Couret, Logistics Director, Leroy-Somer

Results:
• Increased supply chain efficiency, transparency, and communication by enabling more than 100 of Leroy-Somer’s largest suppliers to connect with the company anytime and anywhere.
• Optimized supply chain process to effectively manage and track all forms of transportation.
• Minimized inbound carrier costs to clean and centralize all transportation data on a single system.
• Ensured optimum monitoring of KPIs with a cloud-based transportation data repository capable of generating reports anywhere, at any time.

Lumentum (video) – Used Oracle Global Trade Management Cloud to unify its distributed manufacturing across thirty countries

Challenges:
With its TradeBeam license expiring, Lumentum was looking for a better solution. The company needed a cloud-based alternative to support its import- and export-related activities.

Quote:
“We knew we wanted to be cloud-based because it has the advantages of no up-front investment and rapid deployment. And we also wanted to take a fresh look at our business processes.”

Sree Vaidyanathan, VP Information Technology, Lumentum

Results:
- Improved visibility throughout end-to-end trade processes.
- Gained standardized and more accurate trade data.
- Automated and improved efficiency in trade processes (license determination/assignment).
- Integrated compliance solution to Oracle ERP.

---

Panduit (video) – Optimized its global transportation network with Oracle Transportation Management Cloud.

Challenges:
The company wanted to reduce freight spend and implement additional process discipline. It also wanted a way to identify and create “ship windows” to reduce expedited freight given away by sales.

Quote:
“Deploying Oracle Transportation Management Cloud will allow us to free resources, reduce overhead, and position Panduit to efficiently deliver the most trusted customer experience.”

Sam Hanieh, Global Logistics Manager, Panduit

Results:
- Identified opportunities for cost saving.
- Consolidated orders to reduce freight spend.
- Automated the freight settlement process.
- Developed logistics dashboards for planning and execution, creating a more strategic logistics culture.

## Parts and Services

Protect and build brand loyalty and revenues by creating an excellent customer experience for support, sales, services, and warranties—along with digital service enablement, subscription, and consumption-based billing.

### Roles:
VP/Director Depot Repair, VP/Director Service, VP/Director Support, VP Warranty Administration / Management

### Key Challenges

As markets continue to evolve, automotive supply chain companies are bundling services together and selling products as-a-service. This means customers’ expectations around service and support have increased significantly. As such, automotive suppliers must continue to support customers with a frictionless service experience across all channels including web, email, mobile, social, chat, call center, self-service, field service, and partners.

### Best Practices

- Maintaining a central hub, providing a full view of customers, to determine entitlements and sales opportunities, and improve support.
- Creating effective practices to measure performance and profitability within service operations.
- Minimizing field, support, and self-service resolution times—especially those requiring unscheduled maintenance or visits.
- Growing revenue by identifying, creating, and launching profitable new service offerings and aftermarket sales.

### Solutions

- Having limited ability to track call center effectiveness and customer interactions.
- Getting real-time visibility into consumption histories, service analytics, and spares inventories.
- Lacking integration between service with sales, marketing, and back-end systems.
- Delivering a fast, efficient, and profitable service operation in the face of spiraling demand.
Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

### Parts and Services

Protect and build brand loyalty and revenues by creating an excellent customer experience for support, sales, services, and warranties—along with digital service enablement, subscription, and consumption-based billing.

**Roles:** VP/Director Depot Repair, VP/Director Service, VP/Director Support, VP Warranty Administration / Management

Oracle's [Digital Spaces Monetization](https://www.oracle.com) solution combines Oracle's leadership in cloud marketing with mobility to help automotive suppliers transitioning to more service-based business models. It provides a single cloud platform that integrates Internet of Things-based remote service monitoring for connected products with service request management, knowledge management, and customer self-service to exceed customers’ increasing expectations. This enables automotive suppliers to proactively identify potential issues, and often resolve them, by remotely providing a firmware update to the affected devices.

**Key Challenges**

1. Identifying potential issues—and often resolving them—by providing a remote firmware update to the affected devices.

**Best Practices**

- Increasing the number of loyal program members.
- Providing customer behavior intelligence.
- Integrating Internet of Things-based remote service monitoring for connected products with service request management, knowledge management, and customer self-service to exceed customers’ increasing expectations.

**Solutions**

**Key Questions**

- Utilizing advanced real-time scheduling, remote service monitoring, and diagnostics to boost service-technician productivity and equipment availability.

**Metrics**

- Allocating and planning service-technician resources and spare inventories based on profitability and cost metrics.

**Customer Success**

- Executing an efficient and comprehensive warranty administration from service request, through entitlement, service, and financial reconciliation.

**Key Resources**

- Parts and Services
  - Protect and build brand loyalty and revenues by creating an excellent customer experience for support, sales, services, and warranties—along with digital service enablement, subscription, and consumption-based billing.

Roles: VP/Director Depot Repair, VP/Director Service, VP/Director Support, VP Warranty Administration / Management

Key Challenges

- Are you under pressure to increase first-time fix while reducing the cost to serve?
- Do you have an integrated service platform focused on driving customer engagement, improving retention, and increasing sales?
- How will your service business scale and remain profitable as assets become connected in real time?
- Do you see service as a key differentiator for your business, and what percentage of your revenue is driven from service—today and in the future?
- What are your customers saying about your equipment versus your competitors’ equipment, including available competitive warranties?

Best Practices

- Do you maximize the amount of revenue that you could drive across the entire service lifecycle?
- What is the average percentage split between reactive, planned, and proactive repairs?

Solutions

- Protect and build brand loyalty and revenues by creating an excellent customer experience for support, sales, services, and warranties—along with digital service enablement, subscription, and consumption-based billing.

---

Rasamny-Younis Motor Company (RYMCO) (case study) – Improved customer service and decreased time spent on monthly reports by 93 percent.

Challenges:
Help customers choose and maintain their vehicles while simultaneously accelerating monthly financials and sales, improving servicing performance, and inventory reporting to ensure enhanced customer satisfaction.

Quote:
“Since installing Oracle Database Appliance, we have had fantastic feedback from our users. They can now generate reports much more quickly and the service is very stable. It’s been an excellent choice that has allowed us to focus on our main business objective—making sure our customers are always completely satisfied.”

Naseer Ghanem, IT Manager, RYMCO

Results:
- Delivered high-availability database services, improving efficiency and boosting service in automobile showrooms and service centers by replacing custom-built legacy HP servers with plug-and-play Oracle Database Appliance.
- Deployed the new solution in under three working days, ensuring minimum disruption to showroom and service center operations.
- Improved overall performance by 60% and reduced response time by 10x—enabling managers to make faster decisions.

---

Panasonic (case study) – Enhanced customer satisfaction by boosting customer self-service rate 13x with Oracle Service Cloud.

Challenges:
The company wanted to create an easy-to-use support website, with FAQ content, and improve operating efficiency for customer service.

Quote:
"Thanks to Oracle Service Cloud’s robust, easy-to-use reporting and analytics capabilities, we can deliver the most relevant and updated FAQ content to our customers. With Oracle, our FAQ access rates are 21x higher. We also improved customer self-service rate by 13x."

Motoaki Sashida, General Manager, Information System Group, Panasonic Corporation

Results:
- Increased FAQ rate by 21 times.
- Slashed email inquiries by 20%.
- Built a global FAQ site for 37 countries.
Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Key Challenges

Challenges:
The company wanted to enable its sales representatives to easily access a centralized knowledge base.

Quote:
"With Oracle Service Cloud, we gained an integrated knowledge-management platform to ensure consistent and up-to-date frequently asked questions content, enabling us to manage content more efficiently and cut overall maintenance costs by 40%.”

Eiji Shinohara, General Manager, Sales and Service Process Transformation Department, Business Process Transformation, Corporate Division, Ricoh Company, Ltd.

Results:
- Reduced overall maintenance costs by 40%.
- Improved customer service by enabling sales representatives and engineers to provide rapid responses to diverse customer inquiries.
- Streamlined call center support services by providing customers with online FAQs, facilitating self-service, and enabling them to quickly find the most relevant answers to questions.

Ricoh (case study) – Improved customer service and reduced overall maintenance costs with Oracle Service Cloud.

Key Challenges

- How do you attract and retain top technology staff?
- Is your HR platform powerful enough to enable digital business transformation?
- Are you prepared for the next wave of business disruption?
- How do you drive efficiencies in your HR processes?
Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

### Key Challenges

**Human Resources**

Recruit and match best candidates to job requirements, develop and reward top performers, retain critical knowledge and key talent for the long term.

**Roles:** CHRO, VP Human Resources, CEO, CFO, COO

Human Resources

Recruit and match best candidates to job requirements, develop and reward top performers, retain critical knowledge and key talent for the long term.

Roles: CHRO, VP Human Resources, CEO, CFO, COO

G-TEKT Co. (case study) – Maximized talent potential and supported growth with Oracle HCM Cloud.

Challenges:
Maximize talent capability by deploying a comprehensive HCM system to capture and manage employee data. Change the mindset of employees towards proactive value by improving the ability to identify and promote young talent to sustain the automotive business.

Quote:
"By gaining complete visibility of HR data with Oracle HCM Cloud, we can easily identify our future leaders and support sustainable growth. Oracle also improved the accuracy, efficiency, and fairness of our evaluation process."

Isao Yoshizawa, Managing Director, Business Administration Division, G-TEKT Corporation.

Results:
- Improved the accuracy and fairness of the evaluation process.
- Enhanced talent management by establishing a robust Oracle HCM Cloud to capture and analyze the information of nearly 1,200 local employees.
- Encouraged proactive thinking, and identification and promotion of young talent.
Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Key Challenges

Finance and Accounting

Provide access to complete, accurate, real-time insights with artificially intelligent financial planning. Comply with increasingly stringent financial reporting regulations and disclosure requirements. Identify and invest in product and service innovations and minimize exposure to risks.

Roles: CFO, VP Finance, Controller

Enterprise Resource Planning (ERP) Cloud

Modern organizations need the agility to respond to rapid change if they are to thrive in the new digital economy. Oracle ERP Cloud is designed for organizations of all sizes. Whether you want to streamline accounting and ledgers, comply with new revenue recognition guidelines, automate expense processing, or report on new KPIs, Oracle ERP Cloud can help. It provides the insights you need to refine your business model, seize competitive opportunities, and become an agile finance team.

Solutions within the Oracle ERP Cloud suite include Financials Cloud, Revenue Management Cloud, Accounting Hub Cloud, Project Financial Management Cloud, Project Management Cloud, Procurement Cloud, Risk Management Cloud, and ERP Analytics.

Enterprise Performance Management (EPM) Cloud

Oracle EPM Cloud helps companies of any size lead with confidence in the digital economy. With industry standards and modern best practice, Oracle EPM Cloud helps you drive accurate, agile plans across the enterprise to analyze profitability, manage costs, and accelerate the financial close.

Solutions within the Oracle EPM Cloud suite include Account Reconciliation Cloud, Enterprise Data Management Cloud, Enterprise Performance Reporting Cloud, Enterprise Planning Cloud, Financial Consolidation and Close Cloud, Planning and Budgeting Cloud, Profitability and Cost Management Cloud, and Tax Reporting Cloud.

---

Toppan SMIC Electronics (Shanghai) (case study) – Automated financial and supply chain processes with Oracle ERP and SCM Cloud solutions.

**Challenges:**
Slow growth due to extensive manual processes and a lack of system integration. The company had poor insight into costs, revenues, and supply chain efficiencies.

**Quote:**
"By automating our financial and supply chain processes with Oracle Enterprise Resource Planning Cloud, we improved operating efficiency and supported our rapidly growing business. We also gained real-time analysis, enabling our management team to make faster decisions."

**Shao Wei, General Manager, Information Technology & Security Management Dept., Management Division, Toppan SMIC Electronics (Shanghai) Co.,Ltd.**

**Results:**
- Gained a scalable cloud solution that increased efficiency by eliminating manual processes.
- Accelerated management decisions with timely visibility across the supply chain through integration and robust reporting.
- Reduced risk and costs by improving operational financial decisions.

Industry Value Map – Automotive Suppliers

Oracle provides a complete, integrated set of solutions to meet the complex needs of automotive suppliers. Oracle enables access to information and creates flexibility to effectively anticipate, manage, and respond to rapidly changing automotive and manufacturing demands for all enterprise processes across all lines of business.

Integration and Analytics

Obtain a complete view of consolidated, cleansed, and enriched data for customers, partners, products, components, and suppliers, with reliable operational data throughout the global organization. Support data-driven insights with a robust model capable of delivering information from disparate sources.

Roles: VP IT, COO, CIO

Key Challenges
Companies need and utilize extraordinarily complex business processes to compete. Process integration and automation must remain flexible to leverage best-in-class applications and technologies, and create the integrated functionality and services they need. They must also avoid hard-coded integrations that are costly to maintain and risky to change.

Best Practices
• Managing a highly fragmented, legacy systems infrastructure.
• Gaining visibility across multiple data sources to enable decisions from key business processes.

Solutions

Key Challenges

Cloud Platform as a Service

- Delivers the infrastructure and middleware components that allow you to build, integrate, migrate, deploy, secure, and manage mobile and web applications in the cloud.
- Redefines how to modernize, innovate, and compete in a digital world.
- Provides openness, maximum security, and built-in intelligence.

Cloud Infrastructure as a Service

- Includes compute, storage, network, bare metal, and container services.
- Enables organizations to run any workload at any time over an enterprise-grade cloud.
- Offers innovative migration tools to simplify how organizations migrate on-premises workloads to the cloud.

Converged Infrastructure

- Consolidates and protects your data to improve cost-efficiency by replacing multi-solution infrastructures.
- Delivers excellent results with cloud-ready IT infrastructure available in three consumption models: on premises, in the public cloud, or Oracle Cloud at Customer.

Align company objectives with an IT strategy and execution plan to streamline all business functions with innovative cloud solutions that enable profitable growth.

Roles: CIO, IT Manager, Head of Infrastructure, PMO, CTO, DBA Manager

Key Challenges

Challenges:
Simplify the laborious task of appraising and selling off unwanted vehicles through auction houses—a process often marked by delays and excessive paperwork for the dealer, the original vehicle owner, and the potential buyer.

Quote:
"Oracle offers an integrated cloud stack that includes business intelligence, analytics, big data preparation, and other services, which will be valuable in the future. It's plug-and-play, so we can add cloud services as we go."

Lynn Clark, CEO, The Factory

Results:
- Gained the ability to quickly connect with external applications and services.
- Implemented real-time data integration and mobile accessibility of dealer management system, credit checking, and background histories for each vehicle.
- Enabled dealers to make on-the-spot offers for vehicles, and enabled owners to immediately accept, decline, or counter offer based on real data results.

The Factory (blog) – Created an online marketplace to simplify wholesale vehicle sales among automotive dealers.
