Announcing Continuous Innovation on Oracle Hyperion Enterprise Performance Management System 11.2

Oracle is today announcing a “Continuous Innovation” release model for Oracle Hyperion Enterprise Performance Management System 11.2, delivering ongoing applications and underlying technology stack updates without a major upgrade. At the same time, we are announcing Oracle Premier Support for Oracle Hyperion EPM System 11.2 through at least 2030.

This means that after upgrading to release 11.2 when it becomes available, Oracle Hyperion EPM System customers running on release 11.2 will be able to continue to access new applications functionality and separately uptake later versions of underlying technology for years to come, without the time and expense of a major release upgrade.

Continuous Innovation on EPM System 11.2

Continuous Investment and Support for Years to come without Major Upgrade

PREMIER SUPPORT THROUGH:
Release 11.2: At least 2030

Oracle Hyperion EPM System customers historically have adopted new versions of the technology stack together with a new applications code level via a major release upgrade. This involved using Oracle Hyperion Installation Technology to deliver new versions of Oracle Fusion Middleware platform technologies, a new applications code level, and upgrade scripts to move the schema and data in place to the new Oracle Hyperion EPM System release level.

It has been Oracle's plan to move to a Continuous Innovation release model that separates technology stack updates from applications code updates, allowing Oracle Hyperion EPM System customers to consume later technology while retaining their current applications code level.

With **Continuous Innovation** now available for Oracle Hyperion EPM System 11.2, customers can expect:

Ongoing Applications Updates—ongoing updates to Oracle Hyperion EPM System 11.2 applications code, analogous to the 11.1.2.4.x updates we have made available on an approximate annually basis. Updates will be cumulative and will combine bug fixes and new features into a consolidated patch set that can be easily applied with O-Patch.

Ongoing Technology Stack Updates—ongoing updates to allow for the needed refresh of the Oracle Fusion Middleware platform technologies underlying the Oracle Hyperion EPM System. These will allow customers to obtain new versions of the technology stack without upgrading the Oracle Hyperion EPM System applications code.

In addition, the Oracle Premier Support policy described in "[Oracle Applications Unlimited and Oracle Premier Support—an Unbeatable Combination](#)" (PDF) now applies to the Oracle Hyperion EPM System 11.2 release. Per the policy, Oracle will not discontinue offering Oracle Premier Support on the Continuous Innovation releases prior to 2030 and, beginning in 2019, we are committed to annually review whether or not to extend the Premier Support offering for an additional year on such Continuous Innovation releases for on-premises applications.

With Continuous Innovation now available, Oracle Hyperion EPM System 11.2 joins other Applications Unlimited product lines (E-Business Suite, PeopleSoft, JD Edwards EnterpriseOne, and Siebel) that also have pledged to provide Continuous Innovation and Premier Support through at least 2030 for their existing releases.
