

Get ready for the cloud with Oracle Soar, the automated upgrade tool

Upgrade or migrate to the cloud? Doing nothing isn't an option.

Standing still only allows the gap between you and your competition to widen. Even if you're currently happy with the value you're getting from your on-premise solution, its lengthy upgrade cycles still make it an expensive option. You can avoid these costs by moving to the cloud.

With a simple upgrade to cloud using our accelerators, you'll get immediate additional value, which will appreciate throughout the ongoing update.

Oracle upgrade: our commitment to you

We've invested in unique accelerators and tools to transform businesses like yours in a quick and simple way. We're committed to your success, and want you to benefit from your investment with Oracle by moving you to the cloud platform.

Low cost

Optimised costs based on a unique understanding of the initial solution and the target solution.

Our conversion toolkit uses automation to reduce human workloads.

High speed

Unique accelerators and upgrade processes simplify and ensure a smooth and efficient transition.

Guaranteed results

Shifts responsibility of success to Oracle through fixed-scope engagements. Your payment plan is aligned to your go live date.

Go live up to **30% faster**

Our automated upgrade journey

The Oracle True Cloud Method automates and regulates your journey to the cloud, reducing the time and cost of migrating by up to **30%**.

Your move is also supported by a dedicated concierge team from Oracle Consulting, which ensures rapid, smooth and predictable outcomes, aligned with industry best practices.

Accelerated upgrade

Our future-ready journey

To help you build a robust business case, we've simplified the first part of your move to the cloud project to 3 phases: Preparation, Experience and Definition.

Preparation

Using our specialised tools, we start by looking at and analysing your current situation. This will give you a full picture of the level of complexity, standardisation and customisation of your current IT setup.

Experience

It's time to get hands-on: through a workshop, we give you a taste of what your cloud-based working environment could look like, reaping the benefits of AI and other emerging technologies. We'll be using your own data as an example to help create a model.

Definition

This is where your business becomes tangible. We'll map your old implemented features to your current requirements, keep what you really need and get rid of what may be redundant. We will then have a full picture of what your new IT setup looks like and can simply calculate timings and any impact on your processes and organisation. Finally, we'll help you prepare a concrete business case for your migration to the cloud.

Accelerate your journey to the cloud today with Oracle.

- Optimise business operations by driving process automation at scale
- Improve performance with greater business intelligence and better, faster decisions
- Drive better value-add from your teams and deliver more strategic business outcomes
