Identify Yourself

Can you relate to these issues?

- Are you under increased pressure to reduce time-to-market for new applications and services?
- Are you overwhelmed by the distributed nature and volume of operational data in your enterprise?
- Does your operational data actually help your development and IT operations teams collaborate?
- Do you have state-of-the-art tools and apps to gather relevant information (monitoring, logs, and so on) when you're troubleshooting issues?
- Do you have tools to make sense of IT operational data, and can you use this data to make good decisions?

What Is It?

Get results **when you need them.**

Oracle Management Cloud is a suite of next-generation integrated monitoring, management and analytics solutions delivered as a service on Oracle Cloud.

- Designed for today's heterogeneous environments: on premises, Oracle Cloud, and third-party cloud services.
- Built on a horizontally scalable big data platform with high-throughput processing to provide real-time analysis and deep insights across technical and business events.
- Configured for automatic analysis of data using machine learning, proactive monitoring, real-time analysis, and correlation across all Oracle Management Cloud services. No need to worry about having multiple information silos across end-user and infrastructure data.

What's It Based On?

It is built on a **smart, unified platform.**

Operational data, including machine-generated data, can be of different types and dimensions. The data that answers your questions is often in multiple systems.

Your uploaded data is stored in a single, unified, big data platform. This data is automatically correlated and processed by a robust and scalable pipeline that offers high throughput processing of massive amounts of data.

Cloud services enabled by this platform offer real-time monitoring, alerting, rapid diagnostics, operational insight, and business analytics.

What's Driving It?

It is powered by **machine learning**.

- Dynamic topology awareness based on all-tier visibility.
- Anomaly detection using powerful data classification techniques enable proactive monitoring.
- Pattern identification with clustering help isolate problems.
- Extrapolation and prediction algorithms provide optimization and capacity planning solutions.
- Correlation of data aids troubleshooting and performance tuning.

Secure, Reliable, Easy, Fast

Data privacy and security is pivotal.

Oracle Management Cloud uses a powerful security model that ensures the security and integrity of your IT operational data in transit and once uploaded to Oracle Management Cloud.

As part of the Oracle Cloud, Oracle Management Cloud is deployed on enterprise-grade infrastructure, fully managed by Oracle.

Using a drag-and-drop interface in various Oracle Management Cloud services, you can answer such questions as “How much CPU will I need in the next three months?” and “Which of my application servers are underutilized?” Slice and dice the data for your specific needs.

Oracle Management Cloud runs on tablet and desktop, with a blazing fast analytics engine to get you results when you need them.

Get Started

How Does It Work?

It all begins with **a few simple steps...**

Get a paid subscription to one of the Oracle Management Cloud offerings. If you need a trial, contact an Oracle sales representative.

Get started by deploying data collection agents on those target hosts whose operational data should be collected and analyzed.

That's it! You have the power of Oracle Management Cloud in your hands to transform IT operational data into insights.

Get a Subscription

Get a subscription to an Oracle Management Cloud service offering that meets your specific needs.

Start with Your Data

Use a simple, self-service approach to load your data into Oracle Management Cloud.

Start Using Rich, Powerful Analytics Solutions

Get started using various analytics apps and tools quickly. Get productive on Day One.

Customize and Visualize

Explore data, build your own analyses, and visualize. Save and share them as widgets. Create custom dashboards.
