

goBalto Analyze

Leveraging Business Intelligence

Communication and transparency are required to move a clinical trial forward efficiently, but how can you do this when you're working with multiple external partners all using different systems with inconsistent reporting conventions?

Reliable Metrics, Instantly Available

Manually prepared data is often too old to accurately represent the current status. Readily proving you're on track can be an ongoing challenge. Where are the bottlenecks?

goBalto Analyze:

- Provides real-time access to a wealth of data across your study portfolio.
- Replaces the need for manual preparation of routine reports.
- Eliminate time wasted on non-productive activities, such as status meetings.

Customized, Flexible Reporting

Standardized reports often lack the flexibility required to address the diverse needs of your globally dispersed and outsourced clinical research teams.

With goBalto Analyze, you can tailor your analytics to your needs by:

- Interacting with your data, running ad-hoc reports.
- Growing your customized library of reports for reuse in published updates.
- Developing reporting needs in a structured environment.

“goBalto Analyze empowers our visibility into the traditionally cumbersome process of activating investigate sites for clinical trials. Capturing robust clinical and operational data allows us to enhance our predictability model for forecasting.”

CAROL ALIYAR
EXECUTIVE VICE PRESIDENT,
STUDY START-UP
SYNEOS HEALTH

Proactive Risk Mitigation

Risk-based challenges are escalating as clinical trials become more global and complex, and as market pressures keep rising for new therapies at an ever-increasing pace.

Real-time study progress reporting drives transparency and highlights

goBalto Analyze is the only solution that provides sponsors, CROs, and sites access to the same information in a secure and controlled manner, ensuring everyone is on the same page at all times.

goBalto Analyze allows you to:

- Keep studies on course and within budget by tracking critical cycle-time metrics.
- Understand where to focus resources to support at-risk regions or sites.
- Conduct real-time assessments of concurrent studies with multiple partners.

Performance Benchmarking and Transparency

Sponsors often have multiple studies running concurrently with several CROs, complicating oversight. Reconciling CROs data with different reporting formats can make timely oversight difficult.

Using goBalto Analyze, you have a single source of truth - one platform used by everyone involved in study startup, which:

- Benchmarks the operational rollout of your studies or teams.
- Facilitates real-time communications with CROs on study progress.
- Improves operational efficiency and strengthens relationships.

Oracle Health Sciences

Oracle Health Sciences breaks down barriers and opens new pathways to unify people and processes, helping to bring new drugs to market faster. As the #1 provider of eClinical solutions (Everest Group, 2017), and powered by the #1 data management technology in the world (Gartner, 2018), Oracle Health Sciences is trusted by 29 of the top 30 pharma, 10 of the top 10 biotech, and 10 of the top 10 CROs for clinical trial and safety management around the globe.

BETTER TOGETHER

Gain insights with real-time status updates across all your studies and a common view shared by all involved. Visually rich analytics and dashboards help transition your team from a process that is reactive to one that is proactive.
