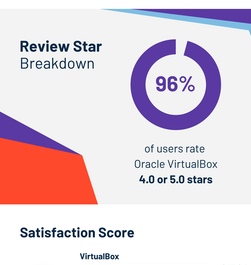
Grid® for Virtual Desktop Infrastructure (VDI) Spring 2020



*The Grid® Report for Virtual Desktop Infrastructure (VDI) Spring 2020 is based off of scores calculated using the G2 Grid® algorithms from reviews collected through March 03, 2020.

Review Star Breakdown

96%

of users rate Oracle VirtualBox **4.0 or 5.0 stars**

Satisfaction Score

VirtualBox 93%
VMware Workstation Pro 80%
VMware Fusion 85%

I like how easy it is to fire up the machine and go about my testing procedures for our software. The VirtualBox behaves exactly as a Windows machine on my mac, and it saves me from having to purchase windows hardware to carry out my tests.

Product Direction

VirtualBox 87%
VMware Workstation Pro 86%
VMware Fusion 78%

VirtualBox is a program that helps to run virtual devices on the same Operating system. **I like this program because I don't need to install different operating systems when I want to learn about them, but rather install them virtually using VirtualBox and check them first.** It is also a useful tool to run Android virtual devices when am developing android applications. The application is simple and easy to use.

- G2 Reviewer, 4.0 stars

Ease of Setup

VirtualBox 90%
VMware Workstation Pro 87%
VMware Fusion 85%

VirtualBox is one of the best solutions for virtualized environments. It is an open source software and a powerful tool to test the deployment of any new operating system and applications. In addition, it works on virtually all operating systems (Windows, Linux, Os2), OpenBSD and Solaris. It is very simple to use, with few clicks you are already enabled to create your virtual machine.

VirtualBox 89%
VMware Workstation Pro 88%
VMware Fusion 88%

VirtualBox is the perfect tool to virtualize machines and run various operating systems such as: Linux distributions, Windows in different versions, Mac, among others. The management system is easy and the installation of the images is very fast. USB 3.0 support is great and allows for adequate flexibility. With VirtualBox I can have multiple systems in the same computer, thanks to this I can plan performance tests and evaluate features in programs that work better in one system or another. VirtualBox has an extensive community of users that help you solve any problem and since OpenSource is free you can make modifications according to your taste.
