

Oracle Digital Assistant for ERP

Conversational AI for Your Business

64% of organizations believe digital assistant technology is increasing the use of finance applications among employees*

Users of digital assistants within financial systems report an average improvement of **36%** in productivity and **38%** faster analysis capabilities*

A Digital Assistant Can Facilitate

Financial Tasks

Easy retrieval, update, and creation of financial transactions such as customer and supplier invoices, invoice adjustment and dispute.

Reconciliation and Reporting

Standardized and automated workflows of reconciliations, reporting, auto-matching transactions, and status monitoring.

Expense and Procurement

Increased employee satisfaction thanks to streamlined, faster, and guided expense submissions and buying experience.

Project Management

Easy access to latest project information, instantly capture project time entries, and provide project status updates as they happen.

Training

Enhanced employee knowledge with real-time self-service FAQs to reduce learning time and training costs, and increase ERP application adoption.

Logistics Across Supply Chains

Easy on-the-go access by employees and customers to order status and shipment tracking with updated location and ETA information.
