# FedEx

## About FedEx

Transportation, logistics and supply chain company

- >450,000 team members worldwide
- >220 countries network
- >15 Million packages daily
- >681 aircrafts
- >180 Thousand vehicles

## Oracle Database

- >3,500 Oracle Database
- >2.1 PetaBytes
- >5 Major US Datacenters

**“I WILL MAKE EVERY  
FEDEX EXPERIENCE  
OUTSTANDING”**

# Our Recovery Appliance Story

## Recovery Appliance POC / Eval

2015

- Bake off vs Current state
- ZDLRA detected back up anomaly not previously known
- POC / Eval was a success
- Minor testing exceptions due to FedEx organization or processes

- Performance degradation across multiple Production DB
- DB Backups causing SAN Disk Read saturation.

2016

## Major Production Issue

## Major Production Issue

2017

- Performance degradation across multiple Production DB
- DB Backups saturated the Fiber Channel to the SAN.

- 13 ZDLRA X7 for Production and Dev/Test
- 5 PetaBytes Total
- Migration 49% Complete

2018

## All In with ZDLRA

## And More ZDLRA

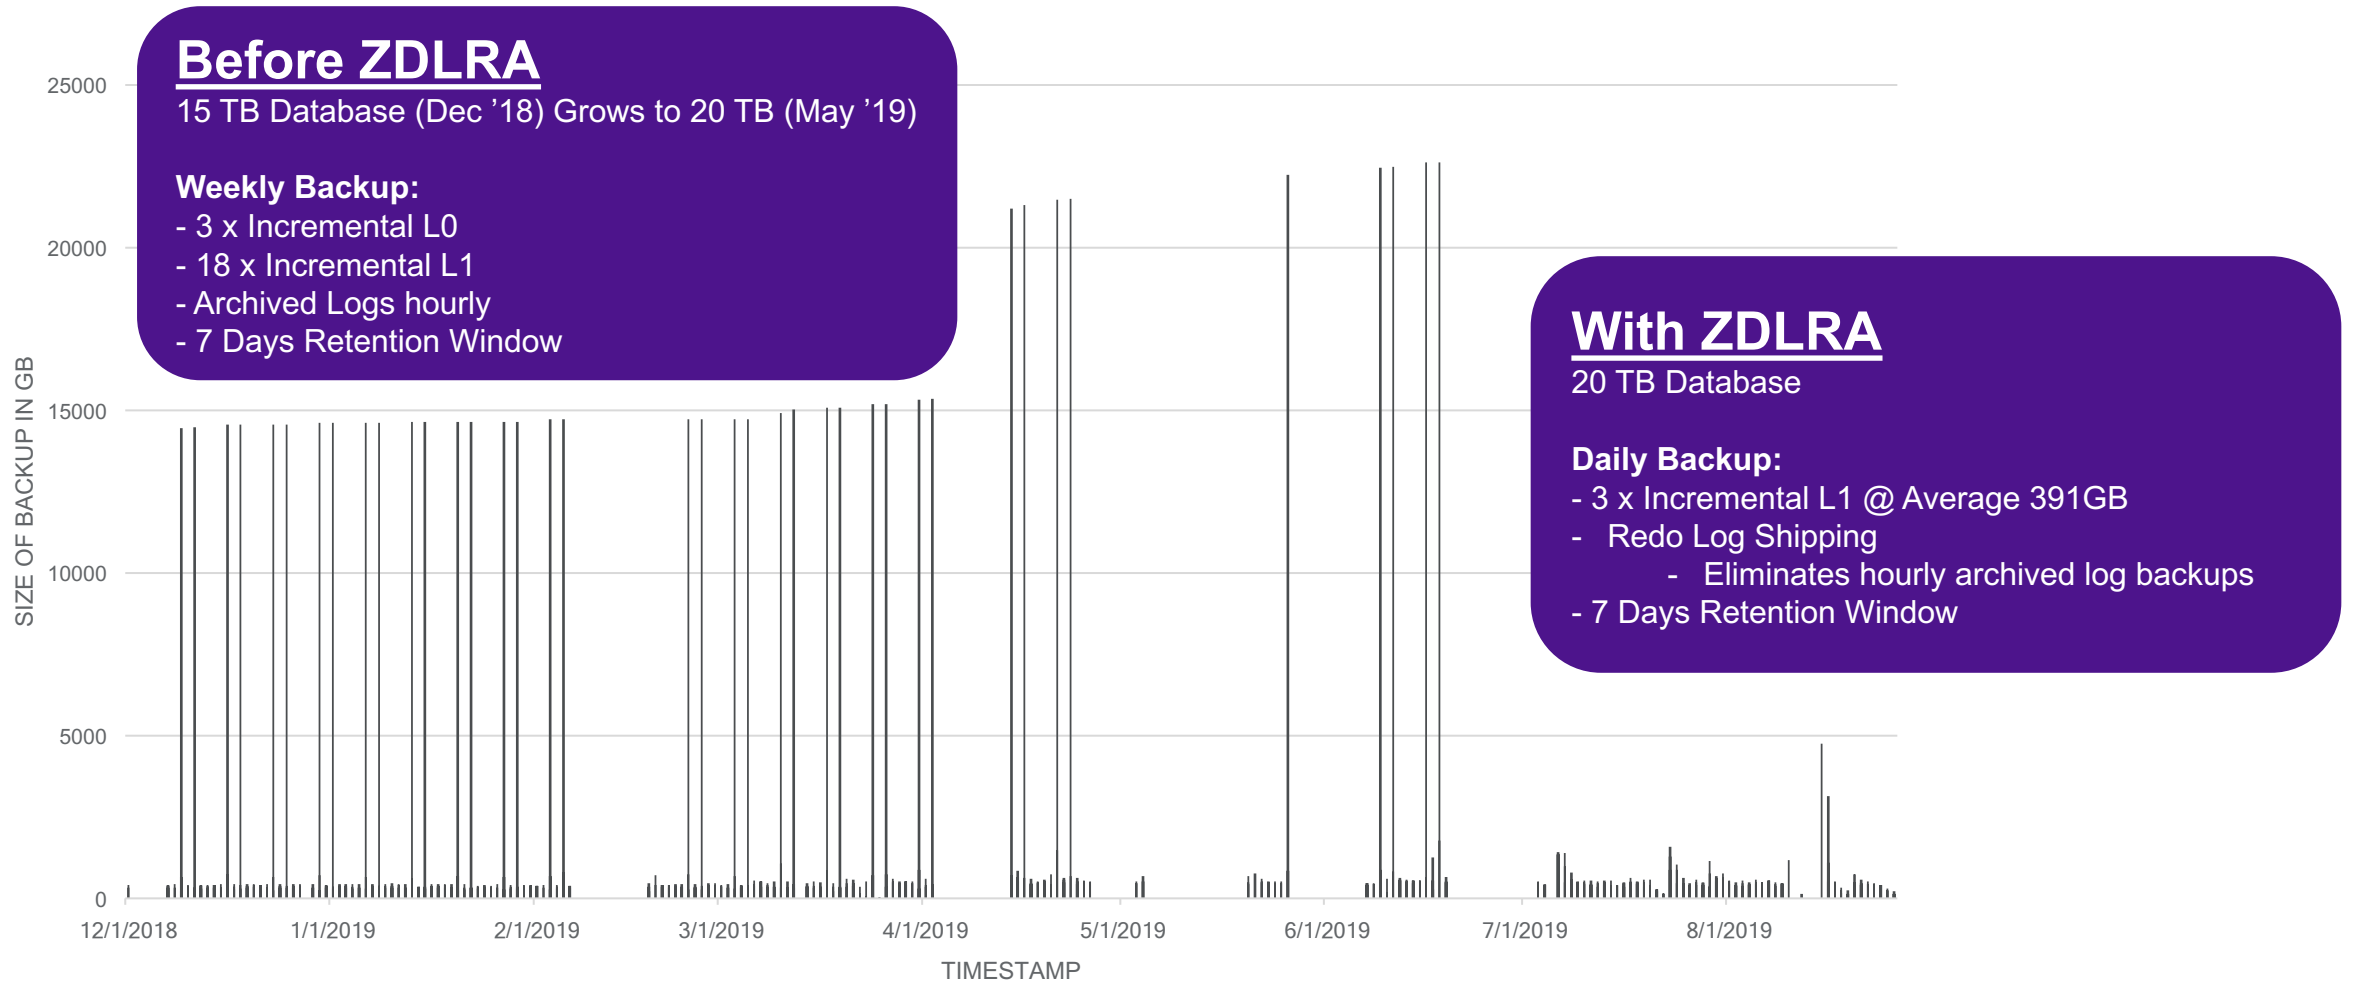

2019

- 9 ZDLRA X8 for Production and Dev/Test
- 6.2 PetaBytes Total

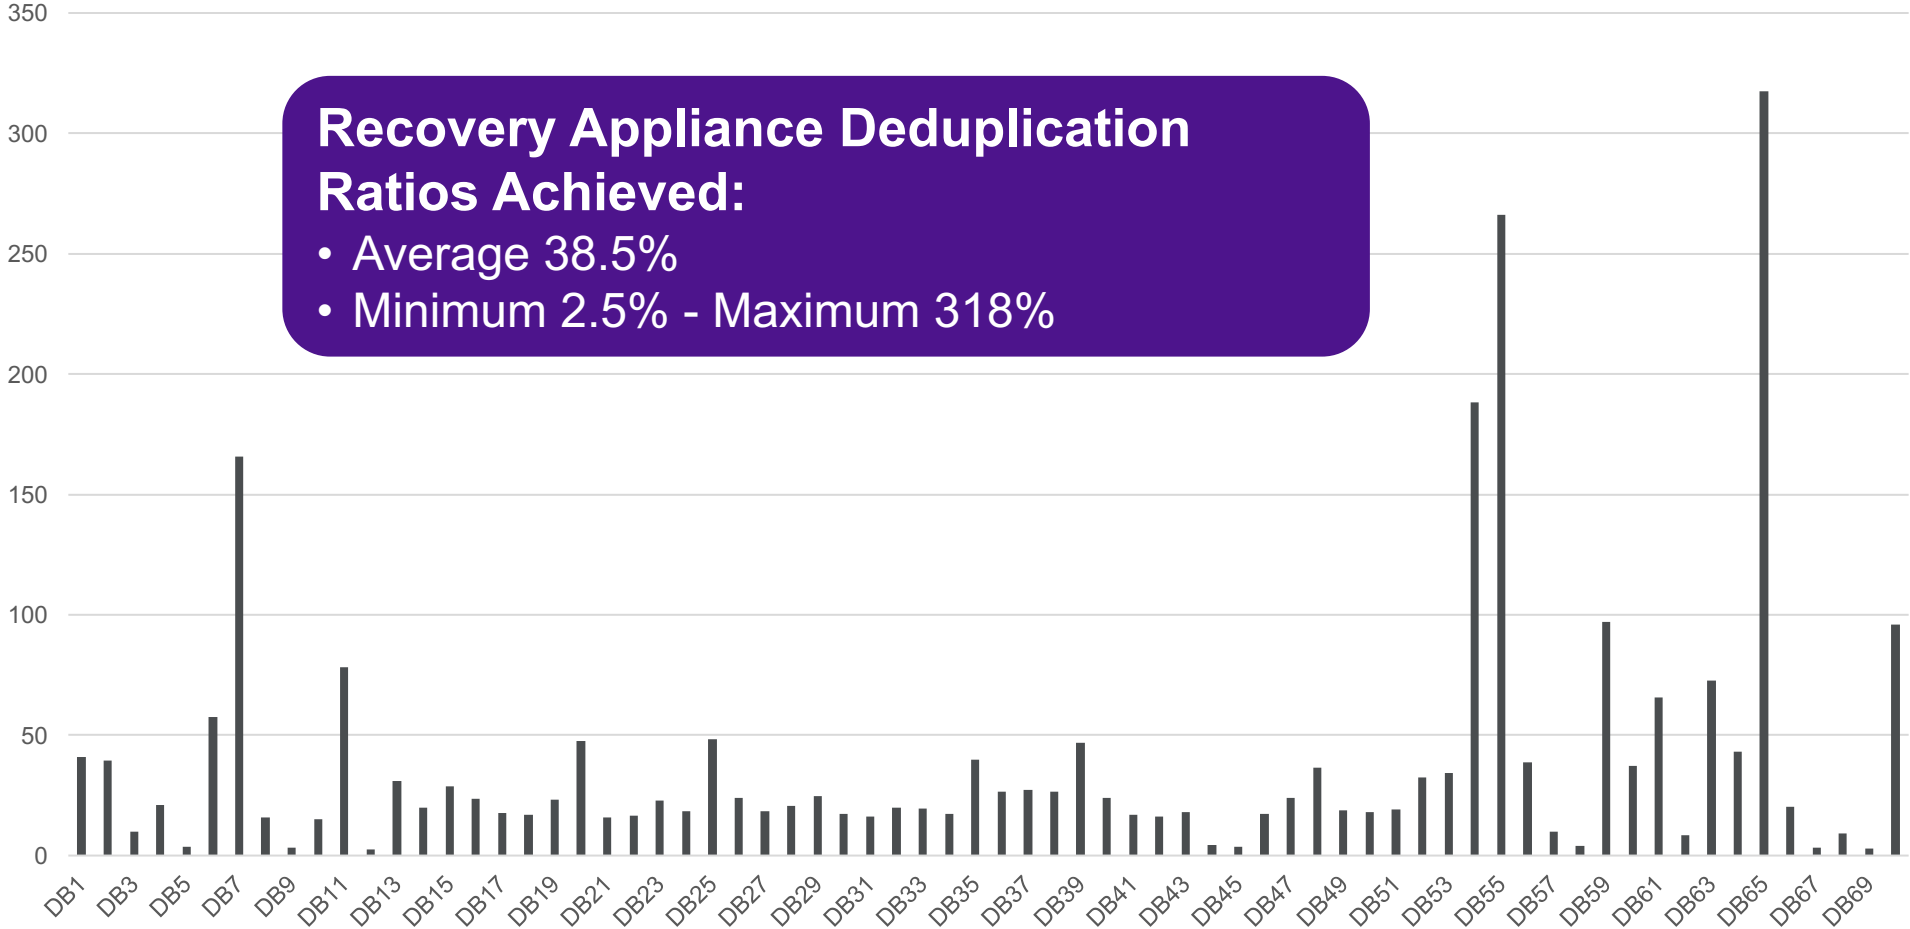

# FedEx – Legacy Database Backup Challenges

- Full backups impacting production DB performance and putting stress on storage subsystems
- Experienced silent backup failures with our traditional backup appliance due to high reader threads on storage appliance
  - Implemented process to mitigate “lost backup” scenario (Not an option for us):
    - Run RMAN CROSSCHECK after backups
    - Run periodic RMAN Catalog Validation
- Database recovery performance was at best about 2TB/hour
- Network traffic over LAN and WAN (replication) high due to data growth and multiple weekly full backups

# Backup Size Profile of One Database – Networking Team is Very Happy with ZDLRA!

# Our ZDLRA Deduplication Ratio Averages 38.5%

# FedEx – Recovery Appliance Landscape

- Minimal database server impact due to backup processes
  - No more performance degradation
- Backups are continuously validated on ZDLRA
  - No more RMAN CROSSCHECK or Catalog Validation tasks just to ensure backups are viable
- Ongoing transactions automatically protected
  - No more hourly archived log backups and RPO reduced from an hour to < 1 second
- Recovery Status is automatically monitored and reported
  - No more having to babysit backups!

# Key Items

- This is an appliance. LEAVE IT ALONE!
- Flashback Recovery Area Management
- Platinum Support Services

# Thank You
