

# New: Oracle BI Publisher 11g Release 11.1.1.6 is available!

With great new features ...

For End Users

## More Data in Interactive Reports

Blazingly fast interactive output with up to a million records in memory. 11.1.1.6 includes a new engine for interactive output that dramatically reduces memory consumption. This new engine can handle a million rows of data -- all in memory -- for incredibly fast response time as you click and filter the data in your interactive report.

## Manage your Favorites

We may not want to admit it but, everyone has their favorites. No more navigating through multiple folders to get the information you need most often. Now you can put your favorite reports directly on the home page so that they are always available as soon as you sign in.

## Scheduled Job Enhancements

Imagine you need to run the weekly new employee report only if someone was hired in the previous week. With 11.1.1.6 you can create jobs that conditionally execute based on the results of a trigger. Did you ever need to include someone new on report distribution after you scheduled the job? Want to reuse a custom recurrence calendar? With Edit Job, you can.

**Define Schedule Trigger**

Use Trigger

A schedule trigger allows you to conditionally execute an occurrence of a job. When the schedule time occurs, the schedule trigger is checked. If the schedule trigger returns data, the job will proceed. If no data is returned the occurrence of that job is skipped.

Data Model  Use Data Model specified in the report

## Enhanced E-Business Suite Support

BI Publisher extends support for Oracle E-Business Suite's data level security to include multi-org implementations. Choose your responsibility and organization on the fly. Use BI Publisher 11g to view, manage, and deliver reports against E-Business Suite data and join and aggregate with data from other data sources. Utilities are also available to help you convert from Oracle Reports and upgrade to BI Publisher 11g.

## For Report Authors

## Making the simple easy

New guided workflow makes simple reports easy to create. And it is flexible so you can jump out at any point. First time and casual users will breeze through the process of creating a new report. As their experience grows they may choose to jump out of the flow and go directly to the powerful report editor instead of being guided.

## Enhanced Parameters and LOVs

Enhanced parameters put you in control and offer choice to your end users. Control where and how to display parameters to report consumers – along the top or the side of the report or in a separate page or dialog. When deployed on a high performance server like Exalytics, hide the Apply button for instantaneous query execution as parameter values change. End users will appreciate the ease of use with check boxes, radio buttons and search as well as being able to hide parameters and see more of their report data.

## Preserve HTML Formatting

Sometimes data throws you a curve ball – like HTML formatted text. No one wants to see raw HTML tags in their report. Further, you want to preserve that formatting. BI Publisher 11.1.1.6 provides a function to automatically handle and preserve HTML tag formatting in data so your report looks good.

## PDF/A and PDF/X Support

When is PDF not good enough? Organizations increasingly need to generate specific output formats such as PDF/A for ISO archival requirements or PDF/X for output to high speed printers. BI Publisher 11.1.1.6 supports both giving you greater options to meet your organizational needs.

### Authentication & Authorization Flexibility

As organizations grow, especially through acquisition, IT infrastructure can get increasingly more sophisticated. 11.1.1.6 of BI Publisher empowers Administrators to keep up with changes in infrastructure by enabling you to independently configure identity and access management servers for authentication and authorization. From the simple to the sophisticated, your reporting infrastructure can match your security infrastructure.
