NOTE: When you access the following files to download, the files names will be appended with a unique ID, for example, elpijuportal-1555899.zip. The ID is not important for the tutorial—the content of each file is! Should you desire, you can rename the zip file once you have downloaded it.

El Piju demo application

- JDeveloper application files in a ZIP archive: [EIPijuPortal.zip](#)

Content for the demo application

- All the files in a ZIP archive: [EIPiju.zip](#)
Use WebDav to upload files to Contribution Folders of your Oracle WebCenter Content Server
- All the content in a Content Server archive: [elpijucustomapp.zip](#)
For importing the archive, see our training module: *Exporting and Importing WebCenter Portal Application Content*

Source files for the module

- JDeveloper application files in a ZIP archive: [EIPijuResources.zip](#)
- [Resources.zip](#) contains the following:
 - Combined resource archive with all 3 Content Presenter templates: `ElPijuContentTemplates.ear`
 - Image Bar template resource archive: `ImageBar.ear`
 - Image Gallery template resource archive: `ImageGallery.ear`
 - Show Attributes template resource archive: `ShowAttributes.ear`
