

Oracle Adapters for IMS/TM

ORACLE ADAPTERS

KEY FEATURES

- Comprehensive IMS/TM Integration
- Leverage and capitalize on existing legacy data
- Accelerate Mainframe integration projects
- Incorporate Mainframe into a service oriented architecture (SOA)
- Real-time integration with IMS/TM Events.
- Standards based support
 - JCA 1.5
 - XML
 - WSDL
 - WSIF
- Easy-to-use, Rich Design-Time
 - Browse and Import metadata contained in PSB, DBD, COBOL copy books.
 - Comprehensive support for COBOL copybook data like Packed Decimal and character data
 - Generate XSD, WSDL schemas
- Easy to set-up, configure and administer
- Support for OS/390, Z/OS UNIX, HP NonStop, OpenVMS and AS/400 platforms.
- Robust Proven Technology
 - Guaranteed exactly once message delivery
 - Scalable and highly available
 - Sophisticated error management capabilities
 - Robust transaction management
 - Integration with mainframe security mechanisms

Analysts estimate that enterprises spend as much as 40% of their IT budgets annually on integration and, that as much as 80% of operational data resides in 'legacy' environments. While new web and composite applications are built to enhance customer service, streamline business operations and build competitive edge, the core IT value in many enterprises remains locked within these legacy systems. Leveraging the huge investments in capital, human resources and business knowledge put into these legacy systems, and integrating them with new technologies and business initiatives is the key for competitive advantage and successful eBusiness. Oracle Adapters provide an easy-to-use, scalable, flexible, standards based SOA platform to enable rapid and real-time access to mainframe applications.

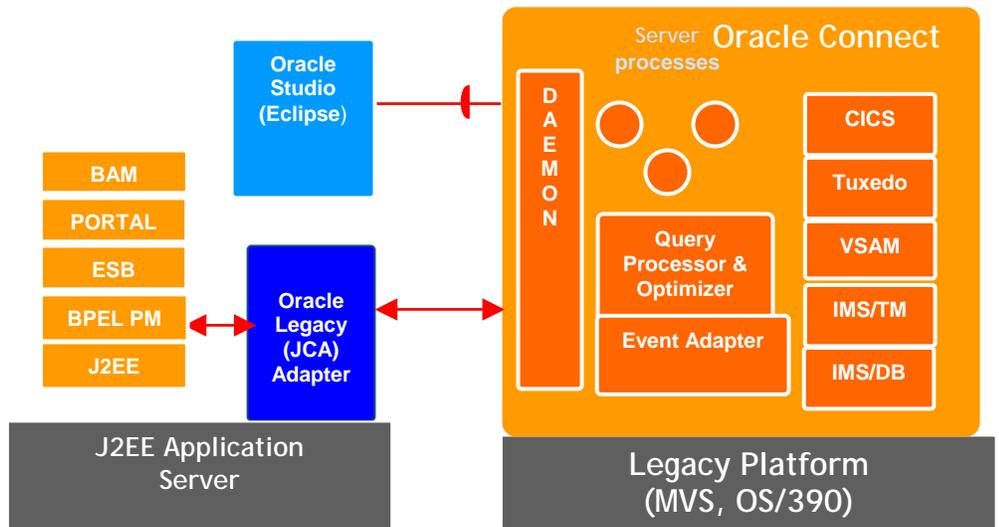

Figure 1: Mainframe Adapter Architecture Diagram

KEY BENEFITS:

- Comprehensive IMS/TM connectivity
- Easy-to-use Eclipse based UI
- Rapid implementation and deployment
- Built on a standards based scalable, flexible and reusable architecture

RELATED PRODUCT AND SERVICES

The Adapter is part of the Oracle Fusion Middleware product family. Related products include:

- Oracle BPEL Process Manager
- Oracle Business Activity Monitoring (Oracle BAM)
- Oracle Portal

RELATED SERVICES

The following services are available from Oracle Support Services:

- Update Subscription Services
- Product Support Services
- OnlineDBA
- OnlineDBA for Applications

Comprehensive IMS/TM connectivity

The Adapter for IMS/TM provides comprehensive IMS/TM connectivity and exposes the underlying IMS/TM transactions as Web Services to other Oracle Fusion Middleware product components.

The Oracle Connect is the core component of the Adapter and resides natively on the legacy systems. It contains an embedded native IMS/TM Adapter for providing highly efficient access to IMS/TM. The Oracle Connect IMS/TM Adapter is modeled as a collection of interactions in which each interaction is mapped to a specific IMS/TM transaction. For each transaction, its particular input record and output record is exposed as an XML schema corresponding to the structure of the communication area used for communicating with the transaction.

Simple and Easy to use Design Time Graphical Interface

Oracle Studio is an easy-to-use graphical tool for configuration and monitoring of Oracle Connect.

The tool has built-in support for introspecting the metadata contained in PSB, DBD, COBOL copy book files and automatically generates appropriate XSD and WSDL schemas for the same. This introspection is dynamic and does not require coding.

Transaction Support

The Oracle Connect engine supports global transactions for IMS/TM applications. For example: an IMS/TM transaction may be part of an XA transaction managed by a J2EE Application Server. The Oracle Connect achieves the above by supporting standard transaction API (XA) and interfacing with IBM's Resource Recovery Service (RRS).

Real-time event capabilities

Oracle Connect is capable of publishing mainframe transaction events in real-time.

The Adapter has an embedded Event Adapter for publishing IMS/TM events in real-time. The Event Adapter is used by the legacy transactional application like IMS/TM to generate an XML event and put it into a reliable and robust queue.

Security

The Adapter supports mainframe security mechanisms like RACF, TopSecret and ACF-2.

Oracle Connect provides a robust security framework, supporting machine-level as well as data source/application-level authentication. Oracle integrates with any of the mainframe security mechanisms listed above. Oracle Connect also supports features such as impersonation, enabling credentials from the client application to pass so that the user will automatically get access rights on the mainframe.

Scalable and robust architecture

Oracle Connect provides a reliable and robust server that is proven to work under changing loads ranging from single user solutions to multi-user solutions supporting millions of requests a day.

The Oracle Connect employs a front-end process that manages client requests (daemon) and request-handlers that process them (called servers). The servers are set up to wait for incoming requests (hot servers), or are loaded upon request. Servers can also be defined to support multiple requests (reusable servers) to handle many incoming requests to handle different types of usage profiles. This flexible and robust server architecture supports changing activity patterns while using only the necessary system resources.

Fail-over and HA

Oracle Connect handles failover by providing back-up daemons so that the system can always accept and handle client requests. If a client request fails, Oracle Connect guarantees the transaction by rolling back any changes that occurred and sending the client application an appropriate error message.

Summary

Oracle Connect for Mainframe is the fastest and most productive way to connect legacy enterprise information in real-time for any new and future initiatives. Using the Oracle Adapters for mainframes, companies can quickly incorporate their mainframe systems into a service-oriented and event-driven architecture, increasing the total value of their existing IT investments.
