

**Security Alert #32**  
**Dated: 17 April 2002**

### **Unauthorized Access Vulnerability in the Oracle E-Business Suite**

#### **Overview**

A potential security vulnerability has been discovered in Oracle E-Business Suite Release 11i. This vulnerability may allow a knowledgeable and malicious user to execute unauthorized procedures inside the Applications Database.

#### **Description**

In the Oracle E-Business Suite, a knowledgeable user can edit the Oracle Applications URL in the browser window to execute an unauthorized procedure (predefined or user-defined PL/SQL) inside the Oracle Applications Database.

#### **Products Affected**

Oracle E-Business Suite Release 11i (Releases 11i.1 - 11i.6)

#### **Platforms Affected**

All

#### **Patch Solution**

Application patches for bugs 2317265 and 2326606 filed against the potential vulnerability described above are available. The patches for this vulnerability can be downloaded from the Oracle Worldwide Support Services web site, Metalink, at <http://metalink.oracle.com>. Press the "Patches" button to get to the Patch Download page. Enter the Patch Number, select a Platform and press Submit.

**IMPORTANT NOTE:** If you apply or have already applied patch 2317265, you must also apply patch 2326606. However, if you apply or have already applied only patch 2326606, there is no need to apply patch 2317265 as well.
