

## Oracle Business Intelligence Sample Application- Add On Deployment

Quick Deployment: Step-by-step instructions to deploy EPM Standalone 11.1.2.4 on SampleApp v607

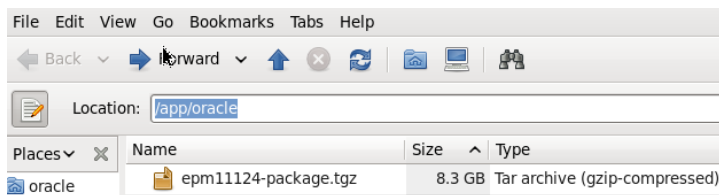

### DEPLOY EPM 11.1.2.4 ON SAMPLEAPP V607

Users looking for a full standalone EPM 11.1.2.4 deployment in a separate MW home.

**IMPORTANT:** when deploying/setting up any SampleApp plug and play component ensure there are no other active processes running on your image at the time of setup.

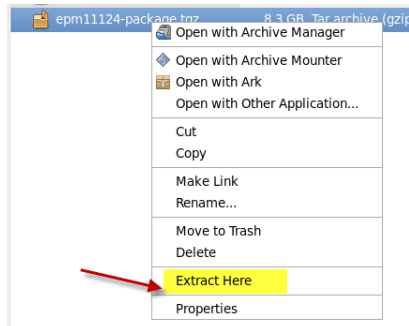

### DOWNLOAD:

From the [SampleApp OTN home page](#) under the v607 **Optional/plugin section** click on the **EPM11.1.2.4 Plug-in** link to download the epm11124-package.tgz file to /app/oracle directory on your SAV607 image

### EXTRACT:

- Navigate to /app/oracle/ and right click on the EPM 11.1.2.4.zip and choose extract here:

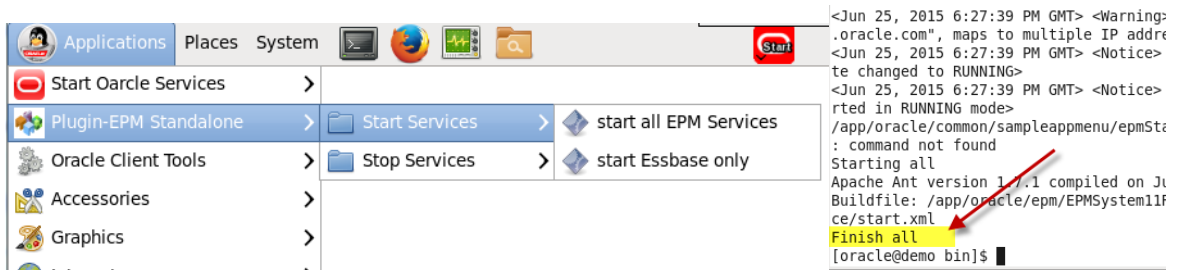

- Extraction will take between 10 to 20 minutes to complete. When finished you will see /app/oracle/epm (you can now delete the epm11124-package.tgz)
- **Your setup is completed**

## STARTING SERVICES:

**IMPORTANT:** use the start scripts located in the Applications/StartSampleApp Services/EPM menu option.

It is strongly recommended you use the EPM Start all script to start all necessary EPM services. The start script will pause several times before finishing- please allow the script to finish completely prior to accessing EPM. - you will be notified by a message of "finish all" when completed

**IMPORTANT:** When using the Start All EPM script your terminal window will return the following message when EPM is ready. You **MUST** keep this window open, closing it will stop your EPM services

```
<Jun 6, 2014 12:45:24 PM EDT> <Warning> <JMX> <BEA-149504> <The administration server was unable to establish JMX Connectivity with the EPMServer0 at the JMX Service URL of service:jmx:t3://[2606:b400:2010:6044:a00:27ff:fedb:f484]:9001/jndi/weblogic.management.mbeanservers.runtime.>
Finish all
[oracle@demo bin]$
```

## DEPLOYMENT DETAILS

### USERNAMES AND PASSWORDS

All EPM product logons are weblogic/Admin123

<http://demo.us.oracle.com:5000/console> **weblogic/Admin123**

<http://demo.us.oracle.com:9001/workspace> **weblogic/Admin123**

## WINDOWS CLIENTS

All available EPM client tools including FR studio and Smartview, HSF client, Taxonomy designer, Offline Planning, OBI for office can be download from the EPM workspace /install menu options.

**Import you cannot use EPM client tools that are packaged with OBIEE, they must be the version packaged with your Standalone EPM deployment**
