

# 5 Ways to Transform Your Cloud Strategy with Oracle Alloy

Oracle Alloy is a dedicated cloud platform delivered as a private-label solution deployed in a partner's data center. With Oracle Alloy, you can brand, operate, and deliver to customers more than 200 Oracle services worldwide while meeting local data, regulatory, and business needs.

## Become a cloud provider—on your terms

Oracle Alloy empowers partners to offer more than 200 Oracle Cloud Infrastructure (OCI) services under their own brands. With full operational, admin, and commercial control, you can deliver customized solutions, set pricing, and deepen customer relationships.

## Provide sovereign cloud and AI innovation

With Oracle Alloy, keep sensitive data, AI models, and cloud operations within local jurisdictions so you can deliver compliance, data residency, and secure AI operations for customers—even in the most regulated industries.

## Address security and governance with confidence

Oracle Alloy leverages OCI's secure and resilient architecture to deliver advanced identity management, encryption, monitoring, and governance features, helping partners safeguard sensitive workloads and exceed compliance expectations.

## Run, update, and build on one powerful platform

Onboard demanding, mission-critical workloads with ease. Modernize legacy applications and accelerate new cloud native development, all from a single high performance, scalable platform.

## Simplify regulatory compliance

Oracle Alloy provides granular controls for data residency, privacy, auditability, and governance, empowering you to confidently meet strict regulatory and industry requirements for customers' sensitive workloads.

## Unlock the power and flexibility of Oracle Alloy today

Discover how Oracle Alloy can transform your cloud business with industry-specific, secure, and compliant solutions—delivered under your brand, powered by Oracle.

## CUSTOMER SUCCESS

"With Oracle Alloy, du Tech provides our customers with a hyperscale cloud solution that ticks all the boxes for sovereignty. We can differentiate our solutions from those of our competitors by making it possible for both public and private sector clients to adopt the full range of OCI services, including generative AI and ML."

Jasim Al Awadi, Chief ICT Officer, du
