

JD Edwards EnterpriseOne Mobile Applications

ORACLE® JD Edwards EnterpriseOne

Mobile computing is fast becoming the business norm. Professionals need the flexibility to rapidly execute time-critical tasks from any location. To keep pace with these requirements, JD Edwards EnterpriseOne provides an array of mobile solutions. JD Edwards EnterpriseOne Mobile Enterprise Applications and JD Edwards EnterpriseOne Mobile Smartphone Applications accelerate business execution on the user's device of choice. Users can easily be up and running with a modern user experience and fit-for-purpose, role-based applications, designed to be companions to the web-based JD Edwards EnterpriseOne modules. Furthermore, JD Edwards provides an integrated development platform for developing and customizing Mobile Enterprise Applications to meet specific or unique business requirements.

Many organizations have already invested in mobility at some level and are looking for ways to define and adopt an overall, fully integrated enterprise mobile strategy that will enable them to optimize the functionality of their mobile applications as well as develop, integrate, and secure mobile applications within their enterprise. To help customers effectively and holistically manage their mobile strategy, JD Edwards offers them the ability to simplify mobile development, integration, security, and analytics using the Oracle Mobile Platform, which can be deployed as Mobile Cloud Service. Managing mobility comprehensively via a mobile platform strategy improves overall business results and accelerates business execution.

KEY FEATURES AND BENEFITS

- Mobile workforce empowered to accelerate business execution and efficiency
- Modern user experience for critical tasks on device of choice
- Leverages JD Edwards security model and data access rules to provide the right information to the appropriate user
- Mobile Enterprise Applications for iOS and Android devices
- Fit-for-purpose and role-based

JD Edwards EnterpriseOne Mobile Enterprise Applications

The consumerization of IT has heightened expectations for a simple, modern user experience from enterprise applications used in the workplace. Users now expect to access and act upon information wherever and whenever necessary and use common device features such as maps, camera, and contacts. JD Edwards EnterpriseOne Mobile Enterprise Applications deliver on these heightened expectations with fit-for-purpose, role-based applications with a native look and feel for iOS and Android smartphones and tablets. Common user interface features and a simple deployment model enable both users and administrators to get started with mobile applications quickly and easily. In addition, mobile device integration offers new capabilities that users cannot access easily through web applications.

- Easy to download applications from Apple's App Store and Google Play
- Device integration for photos, maps, contacts, email, and phone
- Powered by Oracle Mobile Application Framework and JD Edwards EnterpriseOne Application Interface Services
- Technology framework for developing and extending mobile enterprise applications
- Additional Mobile Smartphone Applications powered by Oracle ADF Mobile Browser
- JD Edwards out-of-the box mobile applications managed through Oracle's Mobile Platform and Mobile Cloud Service provides built-in efficiencies resulting in lower cost of ownership

Fit-for-Purpose, Role-Based Companion Applications

While enterprise-grade applications offer complex functionality to support a wide variety of business processes, mobile users are interested in completing specific tasks easily with only a few taps on the device. JD Edwards EnterpriseOne Mobile Enterprise Applications keep it simple by focusing on tasks that mobile users have to perform rather than providing all of the functionality within the JD Edwards EnterpriseOne back office. At the same time, mobile applications are designed to focus on the user's specific role, based on the realization that an employee and a manager, for example, likely have different perspectives on information to view and act upon.

Common User Interface Features

Each JD Edwards EnterpriseOne Mobile Enterprise Application includes common, industry-standard user interface features and navigation including:

- Graphical data summaries such as pie charts and bar graphs
- List display with tap to details
- Search with standard entry and clear features
- Filters to further refine search results
- Primary and secondary action links logically positioned at the top or bottom of the app
- Application tabs with logically grouped information
- Springboard to easily log out and access app information

Simple Deployment

With rapidly growing expectations towards mobility within organizations today, a simple deployment model is essential to quickly meet users' needs. JD Edwards EnterpriseOne Mobile Enterprise Applications are available for download from Apple's App Store and Google Play, allowing customers to evaluate applications that are available. IT staff too requires simplicity in deploying mobile applications, which JD Edwards EnterpriseOne Application Interface Services (AIS) Server provides. Business logic is reused through the AIS Server, ensuring that data access and transaction processing is consistent with users' experience in the web applications. The AIS Server is certified on all supported platforms, yet again simplifying the components required to configure.

Using Oracle's Mobile Platform capabilities can simplify the deployment and management of JD Edwards EnterpriseOne Mobile Enterprise Applications.

Custom Development

JD Edwards EnterpriseOne mobile enterprise applications are built using JD Edwards EnterpriseOne Mobile Framework and Oracle Mobile Application Framework technologies. Customers can use this framework to develop new and extend out-of-the-box EnterpriseOne mobile enterprise applications for iOS and Android devices. The combination of these technologies provides developers a rich mobile development platform that easily integrates with JD Edwards EnterpriseOne back-end applications through the AIS Server included with JD Edwards EnterpriseOne Core Tools and Infrastructure.

Oracle's Mobile Platform offers customers the ability to manage not only the development but also the security and integration of JD Edwards EnterpriseOne Mobile Enterprise Applications.

Available JD Edwards EnterpriseOne Mobile Enterprise Applications

For the most current listing of available JD Edwards EnterpriseOne Mobile Enterprise Applications, search Apple's App Store and Google Play.
